

Road Show Two: Productivity Tour Seminars

Seminar 1: How to be an expert at welding machine setup

Join us for a discussion about how you can get the most productivity out of your Miller welder. Learn about proper machine installation basics and also how you can avoid the most common setup mistakes. Learn maintenance tips and tricks that will allow you to be proactive rather than reactive, saving you both time and money.

Seminar 2: Which welding process is best for which material?

Gain a better understanding of weld processes in order to make an informed decision that will get you the results you need. Discuss GMAW, GMAW-P, and GTAW, and which application each process is best suited for. Plus, an in-depth look at the unique characteristics of mild steel, stainless steel, and aluminum, and the welding processes used for each type of material. Gain a better understanding of the most common weld processes to determine which one works best for your application.

Seminar 3: How can the latest technology work for you?

An introduction to the latest Miller equipment and the technology it offers to save time and reduce costs. Discuss the advantages of upgrading older machines to inverter-based equipment for increased power efficiencies and process enhancements. A general discussion will also take place on increased arc starting capabilities, increased travel speeds, and other features found on these machines that will improve productivity for you.

Seminar 4: Getting the best productivity out of your engine drive

Join us to discuss the latest advancements in Miller engine drive technology. Compare the design of an alternator to a DC generator, and what our design means to your business. Learn about features and capabilities that are new in the industry as well as weld process innovations designed to make your job easier. Also, discuss GTAW and GMAW features that are compatible with your Miller engine drive.

Seminar 4a: Miller Electric and You: Partners in Business

Discover why Miller Electric is the easiest company to do business with. Discuss the benefits of a large distributor network and short equipment delivery times. And finally, learn about service and technical support that is unmatched, allowing you to meet demands and decrease expenses, which add up to a great way of doing business.
