

GMAW-S DRAG (SHORT CIRCUIT MIG)

A baseline weld was made using automated welding equipment. Voltage, Wire Feed Speed, Travel Speed and Contact-Tip-to-Work Distance were then adjusted individually from baseline weld settings to illustrate how each parameter affects a fillet weld when raised and lowered. Icons in grey indicate the specific parameter adjusted; in the case of amperage, the icon represents the value measured.

Baseline Weld Variables

Wire Type: 0.035 ER70S-6 (Quantum Arc 6) | Transfer Mode: Short Circuit (SCMT)
 Shielding Gas: 75% Argon / 25% Carbon Dioxide | Travel Direction: Backhand (Drag)
 Base Metal: 1/8 in. Cold Rolled Carbon Steel | Nozzle Diameter: 5/8 in.
