The capture zone redefined.
Innovative, extended-capture fume extraction system designed specifically for welding.

The Capture 5 features exclusive ZoneFlow™ technology, which creates a much larger capture area than existing source-capture products and minimizes arm interactions. Capture 5 is far more effective than ambient fume extraction systems.

Conventional technology capture distance is a maximum of 18 inches

ZoneFlow technology increases the capture distance to 5 feet!

Have a certified industrial hygienist test the air in your facility to determine equipment requirements and ensure adequate protection from contaminants.

Patent pending

Fume extractor is warranted for two years, parts and labor.

FILTAIR® Capture 5
Welding Safety
and Health

Quick Specs

Industrial Applications
- Heavy equipment manufacturing
- Fabrication
- Maintenance and repair operations

Processes
- Stick (SMAW)
- Flux-cored (FCAW)
- MIG (GMAW)
- TIG (GTAW)

Filter Media
- 452 sq. ft. (42 sq. m)

Accu-Rated® Airflow
- 900 cfm (425 L/sec.)

Sound Level
- Approximately 77 dBA at 5 ft. (1.5 m)

Motor Specifications
- 3 hp

Input Power
- 208/230 V, 1-phase, 60 Hz
- 460 V, 3-phase, 60 Hz

Dimensions
- H: 43 in. (1,092 mm)
- W: 36 in. (915 mm)
- D: 48 in. (1,219 mm)

Extraction Arm
- 10 in. (254 mm) dia.
- 10 and 12 ft. lengths
  (3 and 3.7 m)

Weight
- 660 lb. (300 kg)
  for extractor with 12 ft. arm
**Extend your fume capture zone**

Capturing fume at the source is critical to maintaining a clean breathing zone for the welder and keeping the facility clean.

The Capture 5 offers up to five feet of fume extraction versus up to 18 inches from conventional source capture extractors. By increasing the area of weld fume capture, it dramatically reduces the amount of interaction a welder has with an arm.

ZoneFlow technology increases the capture zone to 5 feet!

**ZoneFlow tech talk**

ZoneFlow technology creates a negative pressure zone that extends the weld particulate capture distance.

Air moving into the arm is still about 900 cfm. However, ZoneFlow technology also moves clean, filtered air out of the arm at approximately a 90-degree angle which creates a large negative pressure zone. This negative pressure zone forms a type of curtain that funnels the weld fume particulate towards the center of the arm, maximizing capture and extending the capture zone up to five feet deep and four feet wide.

Extended capture zone does not affect shielding gas and weld performance!

**Conventional technology capture zone is a maximum of 18 inches**

**ZoneFlow technology**

Designed to capture fume in larger weld areas while minimizing interactions with the arm.
Cleaner air with FilTek XL filters

The FilTek XL filter’s higher MERV rating means unrivaled filtering performance.

Filters are rated on a MERV scale, which measures filter efficiency based on particle count. MERV ratings range from 1–16, with 16 being the best at filtering small particles — such as those found in weld fumes. The vast majority of weld fumes are less than one micron in diameter, or roughly 1/100th the width of a human hair.

Filters in common air filtration systems often have MERV ratings between 7–11. FilTek XL filters are rated at class-leading MERV 15–16 to capture up to 95 percent of weld fume particulates.

Filter media performance summary

FilTek XL filters have the highest efficiencies and lowest pressure drops to capture better, last longer, and lower operating costs.

FilTek XL filters provide high efficiencies and low operating pressure to out-filter, outperform, and outlast all the rest.

Not just filters — FilTek XL filters

The FilTek XL filter media design results in extended filter life, higher efficiency and stronger suction, resulting in a cleaner work space and improved weld fume capture. Filter media from FilTek XL high-volume filters are made up of a durable substrate with an engineered fiber designed to capture even the smallest of weld fume particles, while maintaining the highest level of efficiency.

The FILTAIR® Advantage

Accu-Rated™ performance summary

- The Capture 5 design and ratings are specific to weld fume capture.
- While most fume extractors have cfm rated at the blower, the Capture 5 is rated at 900 cfm at the capture hood which is where suction is needed to capture weld fume.
- The Capture 5 is designed to exceed the ACGIH recommended weld fume transport velocity of 2,000 feet per minute.

This results in the Capture 5 having stronger suction power for a cleaner work space.

Easy-to-operate extraction arm with external adjustments so air can pass through with less airflow resistance, giving you stronger cfm (airflow). It offers reliable and accurate positioning across the full range of motion of the arm, as well as easy adjustment and maintenance to ensure long-lasting operation. Pre-assembled extraction arms are available in 10- and 12-foot lengths.

Metal cabinet design ensures long-lasting durability in a manufacturing environment.

Capture 5 arm with ZoneFlow technology creates a negative pressure zone that funnels air to the center of the arm from greater distances. The arm features convenient 360-degree rotation for unlimited positioning, which means fewer hood adjustments and extended welding time.

Automatic filter cleaning extends filter life. An automatic pulse cleaning cycle cleans the filter from the inside out every time the machine is turned off. Weld fume particulate is removed from the filter and safely deposited in the particulate disposal drawer. The manual push button and filter cleaning gauge ensures full control for highest airflow and consistent fume extraction throughout the life of the filter.

Balanced arm design is easy to move and stays in position. All adjustments are toolless and can be quickly adjusted by hand.

Pre-assembled arm made of aluminum and steel is extremely durable for long-lasting performance.

Large rear wheels allow for easy movement from one work area to another.

Lockable swivel casters allow users to keep fume extraction system stationary during movement of the arm.
The FILTAIR® Advantage

**Power switch** is conveniently located for easy on/off access.

**Convenient air connection** for dry compressed air supply.  
*Note: Compressed air required to operate cleaning mechanism.*

**208/230 V, 1-phase or 460 V, 3-phase receptacle.**  
Mating connector is included.

**Filter pressure gauge** is easy to read, and indicates when pressure drop increases and cartridge filter needs to be replaced.

**Hinged filter hatch** features a convenient locking mechanism for easy access to the filter and tool-free replacement.

**Particulate disposal bin** provides easy and convenient access to empty out collected particulate. Handles release drawer allowing it to slide out.
1. The fume extraction zone

The FILTAIR® Capture 5 with exclusive ZoneFlow™ technology is designed to create a large, effective weld fume extraction zone. It will operate most effectively in areas where air currents or turbulence are minimal. When used properly, it will capture a large percentage of the fumes at the source, and the larger capture area will allow a welder to complete more welding while reducing interaction with the arm.

Capture zone control

Use the capture zone control to help maintain effective fume extraction in tighter spaces, or while working on smaller weldments where a smaller fume extraction area is desired. Use this control to manage the size of the fume extraction zone. Minimizing the zone effectively reduces the air discharge, while increasing the suction.

2. Hood position and operator safety

The Capture 5 is designed to help protect the user from welding-specific airborne contaminants but must be used correctly to be fully effective.

Position the hood in front of or at side of the weld area in order to draw weld fumes AWAY from the operator. To maximize the extraction zone the angle of arm should be 30–45 degrees off horizontal.

DO NOT position the hood behind the welder, or in any other place that will cause the weld fumes to be pulled across the welder or through his breathing space.

BE AWARE that air turbulence or movement may disrupt the effectiveness or position of the fume extraction zone and increase the possibility that the welder may encounter weld fumes.

KEEP HEAD OUT OF FUMES!
3. The effects of air currents or turbulence

The FILTAIR® Capture 5 is designed to operate most effectively in areas where air currents or turbulence are minimal.

The effectiveness, size and location of the fume extraction zone will be affected by air currents or turbulence in the work space. It is important to be aware of this and to manage the position of the zone by relocating the hood or the entire Capture 5 unit. Take advantage of any air-current patterns to move the fumes away from the operator and into the fume extraction zone.

4. Compensate for air currents using screens or curtains

For the most efficient fume extraction in some environments, it may be necessary to actively manage the air currents to establish more predictable and stationary air space.

Use common welding screens or curtains or other partitions to manage the air movement in the weld area. Position any partition to block the source of air movement while also maintaining at least a 5-foot clear area ON ALL SIDES of the hood to avoid disturbing the air discharge clear area.
