FieldPro Software Update

Software Revision List

FieldPro Smartfeeder

PipeWorx 350 FieldPro
3. Updating Software In Welding Power Source

1 SD Card
Insert SD card into the SD card slot on the front of the unit. Turn power on or cycle power to the welding power source. Unit automatically updates.

The update may take up to two minutes to complete. The front panel display may show dashes and/or H99.

Upon completion of the update, the display shows Crd. Remove SD card to resume normal operation.

Press and hold the Electrode and In Use push buttons simultaneously to verify unit has updated successfully with the correct system software revision level.

4. Updating Software In Wire Feeder

1 SD Card
Connect feeder to power source according to the Owner’s Manual and turn on input power to the welding power source. Insert SD card into SD card slot located next to the set-up panel inside the cover.

Press and hold the Load button for several seconds until the front panel display shows Upd. The update process may take up to five minutes to complete. The display may show Upd, H99, H98, dashes or be blank.

When the update has completed successfully, the display returns to normal operation. Remove SD card.

Press and hold the MIG Type and Memory push buttons simultaneously to verify unit has updated successfully with the correct system software revision level.
