

ENPAK® A60 POWER SYSTEMS: TURN OFF YOUR TRUCK. TURN ON YOUR ENPAK®.

EnPak A60 power systems reduce operating costs and extend work truck life while improving jobsite conditions. Powered by a fuel-efficient diesel engine, A60 systems support busy jobsites with an air compressor, generator and available hydraulic pump — all with the work truck's engine turned off.

Big capabilities

60 cfm compressed air

Get uninterrupted airflow from the EnPak A60's industrial rotary-screw compressor. It can power almost any air tool, including 1-inch impact wrenches and pneumatic pumps — and it's designed for a long life of superior performance.

Electric power

EnPak A60's generator delivers 6,000 watts of continuous 120/240V, 60Hz power to operate high-demand electrical tools.

Hydraulic pump

The Eaton® variable-displacement pump supports reliable, precise crane operation*, delivering 20 gpm closed center/ 15 gpm open center.

Welding support

High-performance Miller® power sources like the Maxstar® 210 and Multimatic™ 200 give the EnPak A60 additional capabilities.

*A60HGE model only.

Exclusive advantages

Load-management system

Automatically matches engine speed to meet demand. Saves fuel, reduces noise and allows the generator, air compressor and hydraulic pump* to run simultaneously.

Auto start/stop technology

Starts engine when a load is applied, stops engine when no load is detected. Saves fuel, reduces noise and lowers emissions.

EnVerter™ technology

Driven by the EnPak's engine, EnVerter technology delivers up to 2,400 watts of 120V, 60Hz power. It can operate jobsite tools and lights, or power an in-cab heater or air conditioner.

Convenient operation

Remote panel

The EnPak A60 has a remote panel with simple, straightforward controls. The remote panel reduces the risk of injury by eliminating the need to climb into the truck bed.

Reduced downtime

Work trucks using EnPak power systems instead of PTOs spend up to 75 percent less time idling. That means less downtime for maintenance/repairs and more time to serve customers.

Significant fuel savings

Using an EnPak A60 means you'll spend up to 30 percent less on fuel. The 24.8 hp diesel engine delivers the power you need and is more efficient than a work truck's large Tier-4 engine.

Reduced maintenance costs

The EnPak's diesel engine doesn't require a diesel particulate filter or diesel exhaust fluid. That means you can spend up to 79 percent less on maintenance.

Less noise

Less noise makes jobsites safer places to work. With its sound-reducing enclosure, an EnPak A60 is up to 10 dB quieter than a work truck's engine — and with auto start/stop technology, the EnPak A60 only runs when necessary.

Using an EnPak® A60 **\$50,000** in fuel and operating costs over the truck's life. instead of idling your work truck can save more than

Choice. Reliability. Professional appearance. EnPak® A60 power systems give you more.

The **EnPak A60HGE** includes a 20-gpm hydraulic pump that's ideal for crane operation. Don't need hydraulic support? The **EnPak A60GE** has the same powerful diesel engine, generator and air compressor — without the expense of a hydraulic pump.

Ruggedly built and rigorously tested to meet ANSI and CSA standards, EnPak A60 systems are proven to withstand high temperatures, rain, salt, dust, impact, vibration and more.

Truck owners can present a professional appearance with an EnPak A60 because all its interior components are concealed within a durable, precision-engineered enclosure.
