ProHeat™ 35
Weld Preheating and Stress Relieving

**Applications**
- Transmission Pipeline – Construction/Repair
- Pipe Fabrication Shops
- Power Piping – Construction/Repair
- Petrochemical – Construction/Repair
- Shipbuilding
- Mining Equipment Maintenance
- Drill Pipe Manufacturing
- Shrink Fit

**Process**
- Induction Heating

**Input Power**
- 460 – 575 VAC, 3-Phase, 60 Hz
- 400 – 460 VAC, 3-Phase, 50/60 Hz

**Temperature Rating**
- Storage: -40° C – +60° C
- Operation: -30° C – +50° C

**Rated Output**
- 35 kW at 100% Duty Cycle, 5 – 30 KHz

**Input Amperes at Rated Output**
- 400 V: 60 Amps
- 460 V: 50 Amps
- 575 V: 40 Amps

**Dimensions**
- H: 27.5 in. (699 mm)
- W: 21.75 in. (552 mm)
- D: 36.75 in. (933 mm)

**Weight**
- Net: 227 lb. (103 kg)
- Ship: 265 lb. (120 kg)

**Easy to install**
Primary power through panel that does not require removal of sheet metal.

**Multiple output**
Provides two insulated connectors for air-cooled blankets or liquid-cooled cables.

**Versatile mobility**
Through a lifting eye or optional running gear designed for construction and maintenance.

**On-board temperature control**
Provides for manual- or temperature-based programming in a simple-to-learn operator interface.

**Multiple control thermocouple inputs**
Available to control on the hottest TC during heating and coolest TC during cooling for uniform heating and quality.

**Open output detection**
Prevents system operation without a covered output receptacle (cable or protective plug).

**Cable identification system**
Knows the type of cable attached and limits output to protect cables and blankets.

**Isolation fault protection**
Provides automatic system shut down should power source output short to ground. A sense lead provides direct feedback to the power source to sense fault condition.

**Operator tutoring system**
Provides helpful information to optimize coil arrangements for maximum performance.

**ProHeat 35 Liquid-Cooled System shown**.

**Low consumable costs**
No fuel costs and minimal insulation costs. Insulation is reusable and may be used 50 times or more, reducing cost of disposal and replacement.

**Uniform heating**
Maintained along and through the heat zone by using induction to heat within the material. The surface of the part is not marred by localized conducted heat at higher than specified temperatures.

**Time-to-temperature**
Faster than conventional processes due to the method of applying the heat, reducing heating cycle time.

**Improved working environment**
Is created during welding. Welders are not exposed to open flame, explosive gases and hot elements associated with fuel gas heating and resistance heating.

**High energy-efficient systems**
(More than 90 percent efficient) transfers more energy to the part, decreasing heating times and improving power efficiency (less than 60-amp current draw).

**Easy set-up**
Achieved using preheat blankets or flexible heating cables combined with user-friendly insulation blankets.
The ProHeat 35 Induction Power Source is designed with two output connectors for either air-cooled blankets or liquid-cooled cables. This capability requires the use of same size air-cooled blankets or in the case of liquid-cooled systems, the applications must be the same (same size pipe, same program and same coil). The Cable Identification System is able to detect which type of cables are attached and configures the maximum output for the power source. This helps to protect cables and blankets from exceeding the rated duty cycle. The outputs are protected through insulated connectors or when not in use, a protective output cap. The system will not operate with an exposed output connector.

### Built-In Temperature Controller

The ProHeat 35 Induction Power Source is equipped with a built-in temperature controller. The controller provides for Manual Programming or Temperature Based Programming. Manual programming provides for setting a power level and a time duration. This is beneficial in preheat applications where a part is heated to temperature and the heating device removed. Temperature Based Programming provides the ability to develop procedures for preheat, hydrogen bake-out or stress relieve. Four control thermocouple inputs and two monitoring thermocouple inputs are provided for heating. The control thermocouples are read by the controller which regulate the heat rise based on the hottest thermocouple and cooling based on the coolest thermocouple. This capability helps to insure the heating and cooling rates are not violated during the procedure. The controller is designed to be easily understood and programmed.

### On-Board Diagnostics

The ProHeat 35 Induction Power Source is designed with on-board diagnostics with operator tutoring. Operating parameters are available at the touch of a button. Induction parameters are highly dependent on how the heating system (blanket or cable) is placed on the part to be heated. The ProHeat provides for Limit Conditions where a parameter maximum has occurred. The ProHeat will continue to deliver power, notify the operator and then provide helpful information to increase the output. The ProHeat will also identify Fault Conditions and provide troubleshooting information. The purpose of these capabilities is to provide continuing education of the operator on the use of induction heating equipment and protect the system.

Certified by Canadian Standards Association to both the Canadian and U.S. Standards.
When a control panel button is pushed the yellow lamp lights to indicate activation.

1. Temperature Units LEDs (LEDs indicate units for temperature measurements [°F or °C])
2. Control Thermocouple LEDs (LEDs indicate which thermocouples [1–4] are used to control the heating process)
3. TC1–4 Temperature Display (Provides temperature display of thermocouples 1 through 4)
4. Fault LED (LED lights to indicate a system fault condition)
5. Limit LED (LED lights to indicate a system limit condition)
6. Heat On LED (LED lights to indicate the power source output is energized)
7. Thermocouple Input Receptacles (Use receptacles for type K thermocouple inputs)
8. Run Button (Use button to run a heating process)
9. Hold Button (Use button to hold a heating process)
10. Stop Button (Use button to stop a heating process)
11. Cursor Button (Use button to move selection cursor in the 4 x 40 LCD display [item 12])
12. 4 x 40 LCD Display (Displays programming; run status, parameters, fault and limit conditions, and troubleshooting guide)
13. Increase Button (Use button to increase values)
14. Decrease Button (Use button to decrease value)
15. Cooler Button (Use button to turn cooler on and off)
16. Parameter Button (Use button to display “real time” power source operating parameters)
17. Run Status Button (Use button to display “real time” operating status)
18. Program Button (Use button to program the process control)
19. Power Switch (Use switch to turn power source on and off)
ProHeat™ 35 Air-Cooled Induction System

The Air-Cooled Induction Heating System is specifically designed for preheating applications up to 400°F (204°C). The system can be operated in the Manual Programming mode where a power output is applied to a part for a specified time or in the Temperature Based Programming mode where part temperature is used to control power output. Air-cooled blankets are available for pipe diameters from 8–60 inches (20–152 cm) or in the case of plate, the lengths are 41–205 inches (1–5.2 m).

Typical Applications for Air-Cooled Induction Heating Systems

**On-Shore Transmission Pipelines**
- Provides uniform heating around the circumference of higher strength pipe.
- Maintains temperature on large diameter, thick wall pipe where heat input from process cannot maintain minimum interpass temperature.
- Eliminates propane costs.

**Off-Shore Transmission Pipelines (Barge)**
- Provides uniform heating around the circumference of higher strength pipe.
- Provides rapid time-to-temperature.
- Eliminates propane costs, storage and transportation.
- Eliminates open flame safety hazard on barge.

**Shipbuilding**
- Provides uniform rapid heating in plate applications.
- Multiple outputs and up to four blankets can heat long joints with minimum machines.
- Provides a safer, friendlier work environment for welders and operators. Personnel are not exposed to open flame, explosive gases or hot heating elements.
- Power efficient compared to resistance heating.

**Mining**
- Provides uniform heating on high hardness material to prevent cracking.
- Increases productivity by improving welder environment and maintains temperature.
- Multiple outputs and up to four blankets can heat long joints with minimum machines.
- Eliminates propane costs.
Miller® flexible induction blankets are an innovation in preheat technology from a leader in the welding industry. The flexible, lightweight induction heating blankets come in a variety of sizes and are capable of preheat temperatures up to 400° Fahrenheit (204° C). See Lit. Index No. IN/3.0 for additional information on temperature rating and duty cycle. The blankets easily conform to circular and flat parts and install in a matter of seconds. Manufactured from durable high-temperature materials, flexible induction blankets are designed to withstand the tough conditions in both industrial and construction applications. Each blanket is supplied with two spare blanket-securing straps and one replaceable Kevlar® sleeve which provides added protection against abrasion, cuts and tears, extending blanket life.

Output Extension Cables and Series Cable Adapter

Output extension cables are available in 25-, 50-, and 75-foot (7.6, 15.2, and 22.8 m) lengths and provide interconnection between the power source and flexible induction blanket. This product includes durable twistlock connectors for attachment to the induction blanket. The power source connection is made using an insulated twistlock connector which also identifies the type of heating device to the power source controller (air-cooled or liquid-cooled system). This cable identification system prevents over duty cycling of the heating blanket. A special cable-potting process is utilized at the cable ends to assure the product withstands the rugged environment experienced in the industrial and construction markets.

The series cable adapter is used to combine two blankets in series. This enables one power source and one output cable to be used to create extra heating area using two blankets.

Remote On/Off Switch (Optional)

The Miller® remote contactor control is a simple lightweight control for manually and remotely turning the power source output on and off. It is designed to interface with the ProHeat™ power source through the 14-contact receptacle. The simple rocker-style contact switch is mounted in a rugged housing and includes a 25-foot (7.6 m) cable and 14-contact connector.

Series and Parallel System Configurations

See literature Index No. IN/3.0 Flexible Induction Blankets for more information on air-cooled blanket configurations.
The heavy-duty induction cooler is designed with an efficient fin and tube heat exchanger, 2-1/2-gallon rustproof polyethylene tank, high-pressure pump and blower to yield a high cooling capacity.

- The cooler is equipped with a flow sensor/indicator and temperature sensor to provide system reliability.

- External input and output filters are used to remove contaminants from the cooler and cable. Filters are easily accessible for cleaning.

- Cooler is attached to power source and available separately. The cooler can be added to power source at a later date to upgrade from air-cooled to liquid-cooled systems.

- Running gear can be attached to power source or cooler.

- Dimensions
  - H: 12.75 in. (324 mm)
  - W: 21.25 in. (540 mm)
  - D: 30 in. (762 mm)

- Shipping Weight
  - 122 lb. (55 kg)
Output Extension Cables

The output extension cables are available to remote the power source up to 75 feet (22.8 m) from the work. Insulated quick-connects are used to easily remove and attach the coolant lines. The power source connector securely locks the cable to the power source and insulates the output connector. The Cable Identification System built into the connector identifies the liquid-cooled systems and permits full power. The cables are flexible for ease of use.

Liquid-Cooled Heating Cable and Preheat Cable Covers

The liquid-cooled heating cable couples the power to the part to be heated. The silicone hose encloses a special copper conductor specifically designed for carrying high-frequency current to maximize efficiency. The hose also carries the coolant, which cools the conducting wire. The hose is reinforced for strength and durability.

Preheat cable covers are available to protect the heating cable from slag and molten metal created during welding. The cable covers must be used with the 1/2-inch (12.7 mm) preheat insulation up to 650° Fahrenheit (343° C).

Preheat Insulation and Postweld Heat Treatment Insulation Blankets

The insulation is designed to insulate the work for process efficiency, maintain the optimum coupling distance between the coil and the work and protect the liquid-cooled cable from high temperatures.

Preheat insulation is provided in strips 6 or 12 inches (15.2 or 30.5 cm) wide and 10 feet (3 m) long. Preheat insulation is 1/2-inch (12.7 mm) thick due to the lower temperatures of preheating (typically up to 600° Fahrenheit). The insulation is cut to length for the application.

Preheat cable covers are available to protect the heating cable from slag and molten metal created during welding. The cable covers must be used with the 1/2-inch (12.7 mm) preheat insulation up to 650° Fahrenheit (343° C).

Postweld heat treatment insulation blankets are sized and stenciled for the pipe size to be treated. The insulation is sewn into a silica blanket, which provides high durability. Fifty thermal cycles or more can be achieved with one blanket. The sewn blanket insulation does not create the dust and particulate associated with insulation. This creates a friendlier environment for the heat-treaters and welders.

This creates a friendlier environment for the heat-treaters and welders.

Digital Recorder with Protective Enclosure (Optional)

The digital recorder is commonly used in stress relieving and critical preheat applications. The recorder stores temperature data based on time. It is not required to perform successful heating applications.

- The recorder is attached to power source top panel or can be removed for office downloads, storage or protection when not in use.
- The recorder power cord plugs into the rear of the ProHeat.
- The recorder power cord plugs into the rear of the ProHeat.
- Six or twelve temperature (0–10 V) inputs provide temperature data on the heating cycle.
- The recorder is equipped with a touch screen for simple programming and use. The color display permits clear monitoring of the heating process in outdoor environment (direct sunlight).
- Data can be transferred from internal memory to USB memory stick or directly to a PC via a network cable for printing, storage or further analysis. Files are encrypted for quality assurance.
- Simplified software prints recorded information onto standard letter-size paper (8.5 x 11 inch) for convenient handling.
- The recorder does not require pens, paper or fragile mechanical devices to document the heating cycle.
- Dimensions
  - H: 14 in. (356 mm)
  - W: 12 in. (305 mm)
  - D: 18 in. (457 mm)
- Shipping Weight
  - 22 lb. (10 kg)

TC Extension Cable

The thermocouple extension cable is a simple means of providing thermocouple inputs from the heated part to the power source. The durable 50-foot (15.2 m) cable eliminates the cluttered stringing of individual wires to the work. The terminal connection enables six thermocouples to be used with the system.
