Thank you and congratulations on choosing Miller. Now you can get the job done and get it done right. We know you don’t have time to do it any other way.

That’s why when Niels Miller first started building arc welders in 1929, he made sure his products offered long-lasting value and superior quality. Like you, his customers couldn’t afford anything less. Miller products had to be more than the best they could be. They had to be the best you could buy.

Today, the people that build and sell Miller products continue the tradition. They’re just as committed to providing equipment and service that meets the high standards of quality and value established in 1929.

This Owner’s Manual is designed to help you get the most out of your Miller products. Please take time to read the Safety precautions. They will help you protect yourself against potential hazards on the worksite. We’ve made installation and operation quick and easy. With Miller you can count on years of reliable service with proper maintenance. And if for some reason the unit needs repair, there’s a Troubleshooting section that will help you figure out what the problem is. The parts list will then help you to decide the exact part you may need to fix the problem. Warranty and service information for your particular model are also provided.

Miller Electric manufactures a full line of welders and welding related equipment. For information on other quality Miller products, contact your local Miller distributor to receive the latest full line catalog or individual specification sheets. To locate your nearest distributor or service agency call 1-800-4-A-Miller, or visit us at www.MillerWelds.com on the web.

COMPLETE PARTS LIST – Available at www.MillerWelds.com

WARRANTY
SECTION 1 – SAFETY PRECAUTIONS - READ BEFORE USING

Protect yourself and others from injury — read, follow, and save these important safety precautions and operating instructions.

1-1. Symbol Usage

Indicates statements not related to personal injury.

Indicates a hazardous situation which, if not avoided, will result in death or serious injury. The possible hazards are shown in the adjoining symbols or explained in the text.

Indicates a hazardous situation which, if not avoided, could result in death or serious injury. The possible hazards are shown in the adjoining symbols or explained in the text.

Indicates special instructions.

This group of symbols means Warning! Watch Out! ELECTRIC SHOCK, MOVING PARTS, and HOT PARTS hazards. Consult symbols and related instructions below for necessary actions to avoid the hazards.

1-2. Arc Welding Hazards

The symbols shown below are used throughout this manual to call attention to and identify possible hazards. When you see the symbol, watch out, and follow the related instructions to avoid the hazard. The safety information given below is only a summary of the more complete safety information found in the Safety Standards listed in Section 1-5. Read and follow all Safety Standards.

Only qualified persons should install, operate, maintain, and repair this unit.

During operation, keep everybody, especially children, away.

ELECTRIC SHOCK can kill.

Touching live electrical parts can cause fatal shocks or severe burns. The electrode and work circuit is electrically live whenever the output is on. The input power circuit and machine internal circuits are also live when power is on. In semiautomatic or automatic wire welding, the wire, wire reel, drive roll housing, and all metal parts touching the welding wire are electrically live. Incorrectly installed or improperly grounded equipment is a hazard.

• Do not touch live electrical parts.

• Wear dry, hole-free insulating gloves and body protection.

• Insulate yourself from work and ground using dry insulating mats or covers big enough to prevent any physical contact with the work or ground.

• Do not use AC output in damp areas, if movement is confined, or if there is a danger of falling.

• Use GFCI protection when operating auxiliary equipment in damp or wet locations.

• Only AC output ONLY if required for the welding process.

• If AC output is required, use remote output control if present on unit.

• Additional safety precautions are required when any of the following electrically hazardous conditions are present: in damp locations or while wearing wet clothing; on metal structures such as floors, gratings, or scaffolds; when in cramped positions such as sitting, kneeling, or lying; or when there is a high risk of unavoidable or accidental contact with the workpiece or ground. For these conditions, use the following equipment in order presented: 1) a semiautomatic DC constant voltage (wire) welder, 2) a DC manual (stick) welder, or 3) an AC welder with reduced open-circuit voltage. In most situations, use of a DC, constant voltage wire welder is recommended. And, do not work alone!

• Disconnect input power or stop engine before installing or servicing this equipment. Lockout/tagout input power according to OSHA 29 CFR 1910.147 (see Safety Standards).

• Properly install, ground, and operate this equipment according to its Owner's Manual and national, state, and local codes.

• Always verify the supply ground – check and be sure that input power cord ground wire is properly connected to ground terminal in disconnect box or that cord plug is connected to a properly grounded receptacle outlet.

• When making input connections, attach proper grounding conductor first – double-check connections.

• Keep cords dry, free of oil and grease, and protected from hot metal and sparks.

• Frequently inspect input power cord and ground conductor for damage or bare wiring – replace immediately if damaged – bare wiring can kill.

• Turn off all equipment when not in use.

• Do not use worn, damaged, undersized, or repaired cables.

• Do not drape cables over your body.

• If earth grounding of the workpiece is required, ground it directly with a separate cable.

• Do not touch electrode if you are in contact with the work, ground, or another electrode from a different machine.

• Do not touch electrode holders connected to two welding machines at the same time since double open-circuit voltage will be present.

• Use only well-maintained equipment. Repair or replace damaged parts at once. Maintain unit according to manual.

• Wear a safety harness if working above floor level.

• Keep all panels and covers securely in place.

• Clamp work cable with good metal-to-metal contact to workpiece or worktable as near the weld as practical.

• Insulate work clamp when not connected to workpiece to prevent contact with any metal object.

• Do not connect more than one electrode or work cable to any single weld output terminal. Disconnect cable for process not in use.

• Use GFCI protection when operating auxiliary equipment in damp or wet locations.

SIGNIFICANT DC VOLTAGE exists in inverter welding power sources AFTER removal of input power.

• Turn Off inverter, disconnect input power, and discharge input capacitors according to instructions in Maintenance Section before touching any parts.

HOT PARTS can burn.

• Do not touch hot parts bare handed.

• Allow cooling period before working on equipment.

• To handle hot parts, use proper tools and/or wear heavy, insulated welding gloves and clothing to prevent burns.
FUMES AND GASES can be hazardous.

Welding produces fumes and gases. Breathing these fumes and gases can be hazardous to your health.

- Keep your head out of the fumes. Do not breathe the fumes.
- If inside, ventilate the area and/or use local forced ventilation at the arc to remove welding fumes and gases. The recommended way to determine adequate ventilation is to sample for the composition and quantity of fumes and gases to which personnel are exposed.
- If ventilation is poor, wear an approved air-supplied respirator.
- Read and understand the Safety Data Sheets (SDSs) and the manufacturer's instructions for adhesives, coatings, cleaners, consumables, coolants, degreasers, fluxes, and metals.
- Work in a confined space only if it is well ventilated, or while wearing an air-supplied respirator. Welding fumes and gases can displace air and lower the oxygen level causing injury or death. Be sure the breathing air is safe.
- Do not weld in locations near degreasing, cleaning, or spraying operations. The heat and rays of the arc can react with vapors to form highly toxic and irritating gases.
- Do not weld on coated metals, such as galvanized, lead, or cadmium plated steel, unless the coating is removed from the weld area. The area is well ventilated, and while wearing an air-supplied respirator. The coatings and any metals containing these elements can give off toxic fumes if welded.

ARC RAYS can burn eyes and skin.

Arc rays from the welding process produce intense visible and invisible (ultraviolet and infrared) rays that can burn eyes and skin. Sparks fly off from the weld.

- Wear an approved welding helmet fitted with a proper shade of filter lenses to protect your face and eyes from arc rays and sparks when welding or watching (see ANSI Z49.1 and Z87.1 listed in Safety Standards).
- Wear approved safety glasses with side shields under your helmet.
- Use protective screens or barriers to protect others from flash, glare and sparks; warn others not to watch the arc.
- Wear body protection made from durable, flame-resistant material (leather, heavy cotton, wool). Body protection includes oil-free clothing such as leather gloves, heavy shirt, cuffless trousers, high shoes, and a cap.

WELDING can cause fire or explosion.

Welding on closed containers, such as tanks, drums, or pipes, can cause them to blow up. Sparks can fly off from the welding arc. The flying sparks, hot workpiece, and hot equipment can cause fires and burns. Accidental contact of electrode to metal objects can cause sparks, explosion, overheating, or fire. Check and be sure the area is safe before doing any welding.

- Remove all flammables within 35 ft (10.7 m) of the welding arc. If this is not possible, tightly cover them with approved covers.
- Do not weld where flying sparks can strike flammable material.
- Protect yourself and others from flying sparks and hot metal.
- Be alert that welding sparks and hot materials from welding can easily go through small cracks and openings to adjacent areas.
- Watch for fire, and keep a fire extinguisher nearby.
- Be aware that welding on a ceiling, floor, bulkhead, or partition can cause fire on the hidden side.
- Do not weld on containers that have held combustibles, or on closed containers such as tanks, drums, or pipes unless they are properly prepared according to AWS F4.1 and AWS A6.8.0 (see Safety Standards).
- Do not weld where the atmosphere may contain flammable dust, gas, or liquid vapors (such as gasoline).
- Connect work cable to the work as close to the welding area as practical to prevent welding current from traveling long, possibly unknown paths and causing electric shock, sparks, and fire hazards.
- Do not use welder to thaw frozen pipes.

- Remove stick electrode from holder or cut off welding wire at contact tip when not in use.
- Wear body protection made from durable, flame-resistant material (leather, heavy cotton, wool). Body protection includes oil-free clothing such as leather gloves, heavy shirt, cuffless trousers, high shoes, and a cap.
- Remove any combustibles, such as a butane lighter or matches, from your person before doing any welding.
- After completion of weld, inspect area to ensure it is free of sparks, glowing embers, and flames.
- Use only correct fuses or circuit breakers. Do not oversized or bypass them.
- Follow requirements in OSHA 1910.252 (a) (2) (iv) and NFPA 51B for hot work and have a fire watcher and extinguisher nearby.
- Read and understand the Safety Data Sheets (SDSs) and the manufacturer's instructions for adhesives, coatings, cleaners, consumables, coolants, degreasers, fluxes, and metals.

FLYING METAL or DIRT can injure eyes.

- Welding, chipping, wire brushing, and grinding cause sparks and flying metal. As welds cool, they can throw off slag.
- Wear approved safety glasses with side shields even under your welding helmet.

BUILDUP OF GAS can injure or kill.

- Shut off compressed gas supply when not in use.
- Always ventilate confined spaces or use approved air-supplied respirator.

ELECTRIC AND MAGNETIC FIELDS (EMF) can affect Implanted Medical Devices.

- Wearers of Pacemakers and other Implanted Medical Devices should keep away.
- Implanted Medical Device wearers should consult their doctor and the device manufacturer before going near arc welding, spot welding, gouging, plasma arc cutting, or induction heating operations.

NOISE can damage hearing.

- Wear approved ear protection if noise level is high.

CYLINDERS can explode if damaged.

Compressed gas cylinders contain gas under high pressure. If damaged, a cylinder can explode. Since gas cylinders are normally part of the welding process, be sure to treat them carefully.

- Protect compressed gas cylinders from excessive heat, mechanical shocks, physical damage, slag, open flames, sparks, and arcs.
- Install cylinders in an upright position by securing to a stationary support or cylinder rack to prevent falling or tipping.
- Keep cylinders away from any welding or other electrical circuits.
- Never drape a welding torch over a gas cylinder.
- Never allow a welding electrode to touch any cylinder.
- Never weld on a pressurized cylinder – explosion will result.
- Use only correct compressed gas cylinders, regulators, hoses, and fittings designed for the specific application; maintain them and associated parts in good condition.
- Turn face away from valve outlet when opening cylinder valve. Do not stand in front of or behind the regulator when opening the valve.
- Keep protective cap in place over valve except when cylinder is in use or connected for use.
- Use the right equipment, correct procedures, and sufficient numbers of persons to lift and move cylinders.
- Read and follow instructions on compressed gas cylinders, associated equipment, and Compressed Gas Association (CGA) publication P-1 listed in Safety Standards.
1-3. Additional Symbols For Installation, Operation, And Maintenance

**FIRE OR EXPLOSION** hazard.
- Do not install or place unit on, over, or near combustible surfaces.
- Do not install unit near flammables.
- Do not overload building wiring – be sure power supply system is properly sized, rated, and protected to handle this unit.

**FALLING EQUIPMENT** can injure.
- Use lifting eye to lift unit only, NOT running gear, gas cylinders, or any other accessories.
- Use equipment of adequate capacity to lift and support unit.
- If using lift forks to move unit, be sure forks are long enough to extend beyond opposite side of unit.
- Keep equipment (cables and cords) away from moving vehicles when working from an aerial location.
- Follow the guidelines in the Applications Manual for the Revised NIOSH Lifting Equation (Publication No. 94-110) when manually lifting heavy parts or equipment.

**OVERUSE** can cause **OVERHEATING**
- Allow cooling period; follow rated duty cycle.
- Reduce current or reduce duty cycle before starting to weld again.
- Do not block or filter airflow to unit.

**FLYING SPARKS** can injure.
- Wear a face shield to protect eyes and face.
- Shape tungsten electrode only on grinder with proper guards in a safe location wearing proper face, hand, and body protection.
- Sparks can cause fires — keep flammables away.

**STATIC (ESD)** can damage PC boards.
- Put on grounded wrist strap BEFORE handling boards or parts.
- Use proper static-proof bags and boxes to store, move, or ship PC boards.

**MOVING PARTS** can injure.
- Keep away from moving parts.
- Keep away from pinch points such as drive rolls.

**WELDING WIRE** can injure.
- Do not press gun trigger until instructed to do so.
- Do not point gun toward any part of the body, other people, or any metal when threading welding wire.

**BATTERY EXPLOSION** can injure.
- Do not use welder to charge batteries or jump start vehicles unless it has a battery charging feature designed for this purpose.

**MOVING PARTS** can injure.
- Keep away from moving parts such as fans.
- Keep all doors, panels, covers, and guards closed and securely in place.
- Have only qualified persons remove doors, panels, covers, or guards for maintenance and troubleshooting as necessary.
- Reinstall doors, panels, covers, or guards when maintenance is finished and before reconnecting input power.

**READ INSTRUCTIONS.**
- Read and follow all labels and the Owner’s Manual carefully before installing, operating, or servicing unit. Read the safety information at the beginning of the manual and in each section.
- Use only genuine replacement parts from the manufacturer.
- Perform maintenance and service according to the Owner’s Manuals, industry standards, and national, state, and local codes.

**H.F. RADIATION** can cause interference.
- High-frequency (H.F.) can interfere with radio navigation, safety services, computers, and communications equipment.
- Have only qualified persons familiar with electronic equipment perform this installation.
- The user is responsible for having a qualified electrician promptly correct any interference problem resulting from the installation.
- If notified by the FCC about interference, stop using the equipment at once.
- Have the installation regularly checked and maintained.
- Keep high-frequency source doors and panels tightly shut, keep spark gaps at correct setting, and use grounding and shielding to minimize the possibility of interference.

**ARC WELDING** can cause interference.
- Electromagnetic energy can interfere with sensitive electronic equipment such as computers and computer-driven equipment such as robots.
- Be sure all equipment in the welding area is electromagnetically compatible.
- To reduce possible interference, keep weld cables as short as possible, close together, and down low, such as on the floor.
- Locate welding operation 100 meters from any sensitive electronic equipment.
- Be sure this welding machine is installed and grounded according to this manual.
- If interference still occurs, the user must take extra measures such as moving the welding machine, using shielded cables, using line filters, or shielding the work area.
1-4. California Proposition 65 Warnings

⚠️ Welding or cutting equipment produces fumes or gases which contain chemicals known to the State of California to cause birth defects and, in some cases, cancer. (California Health & Safety Code Section 25249.5 et seq.)

⚠️ This product contains chemicals, including lead, known to the state of California to cause cancer, birth defects, or other reproductive harm. *Wash hands after use.*

1-5. Principal Safety Standards

1-6. EMF Information

Electric current flowing through any conductor causes localized electric and magnetic fields (EMF). The current from arc welding (and allied processes including spot welding, gouging, plasma arc cutting, and induction heating operations) creates an EMF field around the welding circuit. EMF fields may interfere with some medical implants, e.g. pacemakers. Protective measures for persons wearing medical implants have to be taken. For example, restrict access for passers-by or conduct individual risk assessment for welders. All welders should use the following procedures in order to minimize exposure to EMF fields from the welding circuit:

1. Keep cables close together by twisting or taping them, or using a cable cover.
2. Do not place your body between welding cables. Arrange cables to one side and away from the operator.
3. Do not coil or drape cables around your body.
4. Keep head and trunk as far away from the equipment in the welding circuit as possible.
5. Connect work clamp to workpiece as close to the weld as possible.
6. Do not work next to, sit or lean on the welding power source.
7. Do not weld whilst carrying the welding power source or wire feeder.

**About Implanted Medical Devices:**

Implanted Medical Device wearers should consult their doctor and the device manufacturer before performing or going near arc welding, spot welding, gouging, plasma arc cutting, or induction heating operations. If cleared by your doctor, then following the above procedures is recommended.
SECTION 2 – CONSIGNES DE SÉCURITÉ – LIRE AVANT UTILISATION

Pour écarter les risques de blessure pour vous-même et pour autrui — lire, appliquer et ranger en lieu sûr ces consignes relatives aux précautions de sécurité et au mode opératoire.

2-1. Symboles utilisés

DANGER! — Indique une situation dangereuse qui si on l’évite ne peut pas donner la mort ou des blessures graves. Les dangers possibles sont montrés par les symboles joints ou sont expliqués dans le texte.

Indique une situation dangereuse qui si on l’évite ne peut pas donner la mort ou des blessures graves. Les dangers possibles sont montrés par les symboles joints ou sont expliqués dans le texte.

NOTE – Indique des déclarations pas en relation avec des blessures personnelles.

2-2. Dangers relatifs au soudage à l’arc

Les symboles représentés ci-dessous sont utilisés dans ce manuel pour attirer l’attention et identifier les dangers possibles. En présence de l’un de ces symboles, prendre garde et suivre les instructions afférentes pour éviter tout risque. Les instructions en matière de sécurité indiquées ci-dessous ne constituent qu’un sommaire des instructions de sécurité plus complètes fournies dans les normes de sécurité énumérées dans la Section 2-5. Lire et observer toutes les normes de sécurité.

Seul un personnel qualifié est autorisé à installer, faire fonctionner, entretenir et réparer cet appareil.

Pendant le fonctionnement, maintenir à distance toutes les personnes, notamment les enfants de l’appareil.

UNE DÉCHARGE ÉLECTRIQUE peut entraîner la mort.

Le contact d’organes électriques sous tension peut provoquer des accidents mortels ou des brûlures graves. Le circuit de l’électrode et de la pièce est sous tension lorsque le courant est délivré à la sortie. Le circuit d’alimentation et les circuits internes de la machine sont également sous tension lorsque l’alimentation est sur Marche. Dans le mode de soudage avec du fil, le fil, le dérouleur, le bloc de commande du rouleau et toutes les parties métalliques en contact avec le fil sont sous tension électrique. Un équipement installé ou mis à la terre de manière incorrecte ou impropre constitue un danger.

- Ne pas toucher aux pièces électriques sous tension.
- Porter des gants isolants et des vêtements de protection secs et sans trous.
- S’isoler de la pièce à couper et du sol en utilisant des housses ou des tapis assez grands afin d’éviter tout contact physique avec la pièce à couper ou le sol.
- Ne pas se servir de source électrique à courant électrique dans les zones humides, dans les endroits confinés ou là où on risque de tomber.
- Se servir d’une source électrique à courant électrique UNIQUEMENT si le procédé de soudage le demande.
- Si l’utilisation d’une source électrique à courant électrique s’avère nécessaire, se servir de la fonction de télécommande si l’appareil en est équipé.
- D’autres consignes de sécurité sont nécessaires dans les conditions suivantes : risques électriques dans un environnement humide ou si l’on porte des vêtements mouillés ; sur des structures métalliques telles que sols, grilles ou échafaudages ; en position coincée comme assise, à genoux ou couchée ; ou s’il y a un risque élevé de contact inévitable ou accidentel avec la pièce à souder ou le sol. Dans ces conditions, utiliser les équipements suivants, dans l’ordre indiqué : 1) un poste à souder DC à tension constante (à fil), 2) un poste à souder DC manuel (électrode) ou 3) un poste à souder AC à tension à vide réduite. Dans la plupart des situations, l’utilisation d’un poste à souder DC à fil à tension constante est recommandée. En outre, ne pas travailler seul !
- Installez, mettez à la terre et utilisez correctement cet équipement conformément à son Manuel d’Utilisation et aux réglementations nationales, gouvernementales et locales.
- Toujours vérifier la terre du cordon d’alimentation. Vérifier et s’assurer que le fil de terre du cordon d’alimentation est bien raccordé à la borne de terre du sectionneur ou que la fiche du cordon est raccordée à une prise correctement mise à la terre.
- En effectuant les raccordements d’entrée, fixer d’abord le conducteur de mise à la terre approprié et contre-vérifier les connexions.
- Les câbles doivent être exempts d’humidité, d’huile et de graisse ; protégez-les contre les étincelles et les pièces métalliques chaudes.
- Vérifier fréquemment le cordon d’alimentation et le conducteur de mise à la terre afin de s’assurer qu’il n’est pas altéré ou dénudé –, le remplacer immédiatement s’il l’est –. Un fil dénudé peut entraîner la mort.
- L’équipement doit être hors tension lorsqu’il n’est pas utilisé.
- Ne pas utiliser des câbles usés, endommagés, de grosseur insuffisante ou mal épissés.
- Ne pas enrouler les câbles autour du corps.
- Si la pièce soudée doit être mise à la terre, le faire directement avec un câble distinct.
- Ne pas toucher l’électrode quand on est en contact avec la pièce, la terre ou une électrode provenant d’une autre machine.
- Ne pas toucher des porte électrodes connectés à deux machines en même temps à cause de la présence d’une tension à vide double.
- N’utiliser qu’un matériel en bon état. Réparer ou remplacer sur-le-champ les pièces endommagées. Entretienner l’appareil conformément à ce manuel.
- Porter un harnais de sécurité si l’on doit travailler au-dessus du sol.
- S’assurer que tous les panneaux et couvercles sont correctement en place.
- Fixer le câble de retour de façon à obtenir un bon contact métal-métal avec la pièce à souder ou la table de travail, le plus près possible de la soudure.
- Isoler la pinces de masse quand pas mis à la pièce pour éviter le contact avec tout objet métallique.
Il reste une TENSION DC NON NÉGLIGEABLE dans les sources de soudage onduleur UNE FOIS l'alimentation coupée.

**LE SOUDAGE peut provoquer un incendie ou une explosion.**

Le soudage effectué sur des conteneurs fermés tels que des réservoirs, tambours, ou des conduites peut provoquer leur éclatement. Des étincelles peuvent être projetées de l’arc de soudure. La projection d’étincelles, des pièces chaude et des équipements chauds peut provoquer des incendies et des brûlures. Le contact accidentel de l’électrode avec des objets métalliques peut provoquer des étincelles, une explosion, un surchauffement ou un incendie. Avant de commencer le soudage, vérifier et s’assurer que l’endroit ne présente pas de danger.

**LES PIÈCES CHAUDES peuvent provoquer des brûlures.**

- Ne pas toucher à mains nues les parties chaudes.
- Prévoir une période de refroidissement avant de travailler à l’équipement.
- Ne pas toucher aux pièces chaudes, utiliser les outils recommandés et porter des gants de soudage et des vêtements épais pour éviter les brûlures.

**LES FUMÉES ET LES GAZ peuvent être dangereux.**

- Eloigner votre tête des fumées. Ne pas respirer les fumées.
- À l’intérieur, ventiler la zone et/ou utiliser une ventilation forcée au niveau de l’arc pour l’évacuation des fumées et des gaz de soudage. Pour déterminer la bonne ventilation, il est recommandé de procéder à un prélèvement pour la composition et la quantité de fumées et de gaz auxquels est exposé le personnel.
- Si la ventilation est médiocre, porter un respirateur anti-vapeurs approuvé.
- Lire et comprendre les fiches de données de sécurité et les instructions du fabricant concernant les adhésifs, les revêtements, les métaux renfermant ces éléments peuvent dégager des fumées toxiques en cas de soudage.
- Ne pas souder dans un endroit situés à proximité d’opérations de dégraissage, de nettoyage ou de pulvérisation. La chaleur et les rayons de l’arc peuvent réagir en présence de vapeurs et forger des gaz hautement toxiques et irritants.
- Travailler dans un espace fermé seulement s’il est bien ventilé ou en portant un respirateur à alimentation d’air. Demander toujours à un surveillant dûment formé de se tenir à proximité. Des fumées et des gaz de soudage peuvent déplacer l’air et abaisser le niveau d’oxygène provoquant des blessures ou des accidents mortels. S’assurer que l’air de respiration ne présente aucun danger.
- Ne pas souder dans des endroits situés à proximité d’opérations de dégraissage, de nettoyage ou de pulvérisation. La chaleur et les rayons de l’arc peuvent réagir en présence de vapeurs et forger des gaz hautement toxiques et irritants.
- Ne pas souder des métaux munis d’un revêtement, tels que l’acier galvanisé, plaqué émail ou au cadmium à moins que le revêtement n’ait été enlevé dans la zone de soudure, que l’endroit soit bien ventilé, et en portant un respirateur à alimentation d’air. Les revêtements et tous les métaux renfermant ces éléments peuvent dégager des fumées toxiques en cas de soudage.

**LES RAYONS DE L’ARC peuvent provoquer des brûlures dans les yeux et sur la peau.**

Le rayonnement de l’arc du procédé de soudage génére des rayons visibles et invisibles intense (ultraviolets et infrarouges) susceptibles de provoquer des brûlures dans les yeux et sur la peau. Des étincelles sont projetées pendant le soudage.

- Porter un casque de soudage approuvé muni de verres filtrants approprié pour protéger visage et yeux pour protéger votre visage et vos yeux pendant le soudage ou pour regarder (voir ANSI Z49.1 et Z87.1 énuméré dans les normes de sécurité).
- Porter des lunettes de sécurité avec écrans latéraux même sous votre casque.

- Ne pas raccorder plus d’une électrode ou plus d’un câble de masse à une même borne de sortie de soudage. Débrancher le câble pour le procédé non utilisé.
- Utiliser une protection différentielle lors de l’utilisation d’un équipement auxiliaire dans des endroits humides ou mouillés.

Avant de commencer le soudage, vérifier et s’assurer que l’endroit ne présente pas de danger.

- Ne pas souder dans un endroit là où des étincelles peuvent tomber sur des substances inflammables.
- Se protéger et d’autres personnes de la projection d’étincelles et de métal chaud.
- Des étincelles et des matériaux chauds du soudage peuvent facilement passer dans d’autres zones en traversant de petites fissures et des ouvertures.
- Surveiller tout déclenchement d’incendie et tenir un extincteur à proximité.
- Le soudage effectué sur un plafond, plancher, paroi ou séparation peut déclencher un incendie de l’autre côté.
- Ne pas effectuer le soudage sur des conteneurs fermés tels que des réservoirs, tambours, ou conduites, à moins qu’ils n’aient été préparés correctement conformément à AWS F4.1 et AWS A6.0 (voir les Normes de Sécurité).
- Ne soudez pas si l’air ambiant est chargé de particules, gaz, ou vapeurs inflammables (vapeur d’essence, par exemple).
- Brancher le câble de masse sur la pièce le plus près possible de la zone de soudage pour éviter le transport du courant sur une longue distance par des chemins inconnus éventuels en provoquant des risques d’électrocution, d’étincelles et d’incendie.
- Ne pas utiliser le poste de soudage pour dégeler des conduites gelées.
- Ne pas augmenter leur puissance; ne pas les poncer.
- Ne pas souder dans un endroit là où des étincelles peuvent tomber sur des substances inflammables.
- Se protéger et d’autres personnes de la projection d’étincelles et de métal chaud.
- Des étincelles et des matériaux chauds du soudage peuvent facilement passer dans d’autres zones en traversant de petites fissures et des ouvertures.
- Surveiller tout déclenchement d’incendie et tenir un extincteur à proximité.
- Ne pas effectuer le soudage sur des conteneurs fermés tels que des réservoirs, tambours, ou conduites, à moins qu’ils n’aient été préparés correctement conformément à AWS F4.1 et AWS A6.0 (voir les Normes de Sécurité).
- Ne soudez pas si l’air ambiant est chargé de particules, gaz, ou vapeurs inflammables (vapeur d’essence, par exemple).
- Brancher le câble de masse sur la pièce le plus près possible de la zone de soudage pour éviter le transport du courant sur une longue distance par des chemins inconnus éventuels en provoquant des risques d’électrocution, d’étincelles et d’incendie.
- Ne pas utiliser le poste de soudage pour dégeler des conduites gelées.
- En cas de non utilisation, enlever la baguette d’électrode du porte-électrode ou couper le fil à la pointe de contact.
- Porter un équipement de protection pour le corps fait d’un matériau résistant et ignifuge (cuir, coton robuste, laine). La protection du corps peut être projetée de l’arc de soudure. La projection d’étincelles, des pièces chaude et des équipements chauds peut provoquer des incendies et des brûlures. Le contact accidentel de l’électrode avec des objets métalliques peut provoquer des étincelles, une explosion, un surchauffement ou un incendie. Avant de commencer le soudage, vérifier et s’assurer que l’endroit ne présente pas de danger.
- Ne pas augmenter leur puissance; ne pas les poncer.
- Ne pas souder dans un endroit là où des étincelles peuvent tomber sur des substances inflammables.
- Se protéger et d’autres personnes de la projection d’étincelles et de métal chaud.
- Des étincelles et des matériaux chauds du soudage peuvent facilement passer dans d’autres zones en traversant de petites fissures et des ouvertures.
- Surveiller tout déclenchement d’incendie et tenir un extincteur à proximité.
- Ne pas effectuer le soudage sur des conteneurs fermés tels que des réservoirs, tambours, ou conduites, à moins qu’ils n’aient été préparés correctement conformément à AWS F4.1 et AWS A6.0 (voir les Normes de Sécurité).
- Ne soudez pas si l’air ambiant est chargé de particules, gaz, ou vapeurs inflammables (vapeur d’essence, par exemple).
- Brancher le câble de masse sur la pièce le plus près possible de la zone de soudage pour éviter le transport du courant sur une longue distance par des chemins inconnus éventuels en provoquant des risques d’électrocution, d’étincelles et d’incendie.
- Ne pas utiliser le poste de soudage pour dégeler des conduites gelées.
- En cas de non utilisation, enlever la baguette d’électrode du porte-électrode ou couper le fil à la pointe de contact.
- Porter un équipement de protection pour le corps fait d’un matériau résistant et ignifuge (cuir, coton robuste, laine). La protection du corps peut être projetée de l’arc de soudure. La projection d’étincelles, des pièces chaude et des équipements chauds peut provoquer des incendies et des brûlures. Le contact accidentel de l’électrode avec des objets métalliques peut provoquer des étincelles, une explosion, un surchauffement ou un incendie. Avant de commencer le soudage, vérifier et s’assurer que l’endroit ne présente pas de danger.
2-3. Dangers supplémentaires en relation avec l’installation, le fonctionnement et la maintenance

**Risque D’INCENDIE OU D’EXPLOSION.**
- Ne pas placer l’appareil sur, au-dessus ou à proximité de surfaces inflammables.
- Ne pas installer l’appareil à proximité de produits inflammables.
- Ne pas surcharger l’installation électrique – s’assurer que l’alimentation est correctement dimensionnée et protégée avant de mettre l’appareil en service.

**LA CHUTE DE L’ÉQUIPEMENT peut provoquer des blessures.**
- Utiliser l’anneau de levage uniquement pour soulever l’appareil, NON PAS les chariots, les bouteilles de gaz ou tout autre accessoire.
- Utiliser un équipement de levage de capacité suffisante pour lever l’appareil.
- En utilisant des fourches de levage pour déplacer l’unité, s’assurer que les fourches sont suffisamment longues pour dépasser du côté opposé de l’appareil.
- Tenir l’équipement (câbles et cordons) à distance des véhicules mobiles lors de toute opération en hauteur.

**LES BOUTEILLES peuvent exploser si elles sont endommagées.**
- Les bouteilles de gaz comprimé contiennent du gaz sous haute pression. Si une bouteille est endommagée, elle peut exploser. Du fait que les bouteilles de gaz font normalement partie du procédé de soudage, les manipuler avec précaution.
- Protéger les bouteilles de gaz comprimé d’une chaleur excessive, des chocs mécaniques, des dommages physiques, du laitier, des flammes ouvertes, des étincelles et des arcs.
- Placer les bouteilles debout dans un support stationnaire ou dans un porte-bouteilles pour les empêcher de tomber ou de se renverser.
- Tenir les bouteilles éloignées des circuits de soudage ou autres circuits électriques.
- Ne jamais placer une torche de soudage sur une bouteille à gaz.
- Une électrode de soudage ne doit jamais entrer en contact avec une bouteille.
- Ne jamais souder une bouteille pressurisée – risque d’explosion.
- Utiliser seulement des bouteilles de gaz comprimé, régulateurs, tuyaux et raccords convenables pour cette application spécifique; les maintenir ainsi que les éléments associés en bon état.
- Tourner le dos à la sortie de vanne lors de l’ouverture de la vanne de la bouteille. Ne pas se tenir devant ou derrière le régulateur lors de l’ouverture de la vanne.
- Le couvercle du détendeur doit toujours être en place, sauf lorsque la bouteille est utilisée ou qu’elle est reliée pour usage ultérieur.
- Utiliser les équipements corrects, les bonnes procédures et suffisamment de personnes pour soulever et déplacer les bouteilles.
- Lire et suivre les instructions sur les bouteilles de gaz comprimé, l’équipement connexe et le dépliant P-1 de la CGA (Compressed Gas Association) mentionné dans les principales normes de sécurité.
LES CHARGES ÉLECTROSTATIQUES peuvent endommager les circuits imprimés.
- Établir la connexion avec la barrette de terre avant de manipuler des cartes ou des pièces.
- Utiliser des pochettes et des boîtes antistatiques pour stocker, déplacer ou expédier des cartes de circuits imprimés.

Les PIÈCES MOBILES peuvent causer des blessures.
- Ne pas s’approcher des organes mobiles.
- Ne pas s’approcher des points de coinement tels que des rouleaux de commande.

LES FILS DE SOUDAGE peuvent provoquer des blessures.
- Ne pas appuyer sur la gâchette avant d’en avoir reçu l'instruction.
- Ne pas diriger le pistolet vers soi, d’autres personnes ou toute pièce mécanique en engageant le fil de soudage.

L’EXPLOSION DE LA BATTERIE peut provoquer des blessures.
- Ne pas utiliser l’appareil de soudage pour charger des batteries ou faire démarrer des véhicules à l’aide de câbles de démarrage, sauf si l’appareil dispose d’une fonctionnalité de charge de batterie destinée à cet usage.

Les PIÈCES MOBILES peuvent causer des blessures.
- S’abstenir de toucher des organes mobiles tels que des ventilateurs.
- Maintenir fermés et verrouillés les portes, panneaux, recouvrements et dispositifs de protection.
  - Lorsque cela est nécessaire pour des travaux d’entretien et de dépannage, faire retirer les portes, panneaux, recouvrements ou dispositifs de protection uniquement par du personnel qualifié.
  - Remettre les portes, panneaux, recouvrements ou dispositifs de protection quand l’entretien est terminé et avant de rebrancher l’alimentation électrique.

LIRE LES INSTRUCTIONS.
- N’utiliser que les pièces de rechange recommandées par le constructeur.
- Effectuer l’entretien en respectant les manuels d’utilisation, les normes industrielles et les codes nationaux, d’état et locaux.

LE RAYONNEMENT HAUTE FRÉQUENCE (H.F.) risque de provoquer des interférences.
- Le rayonnement haute fréquence (H.F.) peut provoquer des interférences avec les équipements de radio-navigations et de communication, les services de sécurité et les ordinateurs.
- Demander seulement à des personnes qualifiées familiarisées avec des équipements électroniques de faire fonctionner l'installation.
- L’utilisateur est tenu de faire corriger rapidement par un électricien qualifié les interférences résultant de l’installation.
- Si le FCC signale des interférences, arrêter immédiatement l’appareil.
- Effectuer régulièrement le contrôle et l’entretien de l’installation.
- Maintenir soigneusement fermés les portes et les panneaux des sources de haute fréquence, maintenir les éclateurs à une distance correcte et utiliser une terre et un blindage pour réduire les interférences éventuelles.

LE SOUDAGE À L’ARC risque de provoquer des interférences.
- L’énergie électromagnétique risque de provoquer des interférences pour l’équipement électronique sensible tel que les ordinateurs et l’équipement commandé par ordinateur tel que les robots.
- Veiller à ce que tout l’équipement de la zone de soudage soit compatible électromagnétiquement.
- Pour réduire la possibilité d’interférence, maintenir les câbles de soudage aussi courts que possible, les grouper, et les poser aussi bas que possible (ex. par terre).
- Veiller à souder à une distance de 100 mètres de tout équipement électronique sensible.
- Veiller à ce que ce poste de soudage soit posé et mis à la terre conformément à ce mode d’emploi.
- En cas d’interférences après avoir pris les mesures précédentes, il incombe à l’utilisateur de prendre des mesures supplémentaires telles que le déplacement du poste, l’utilisation de câbles blindés, l’utilisation de filtres de ligne ou la pose de protecteurs dans la zone de travail.
2-4. Proposition californienne 65 Avertissements

⚠ Les équipements de soudage et de coupe produisent des fumées et des gaz qui contiennent des produits chimiques dont l'État de Californie reconnaît qu'ils provoquent des malformations congénitales et, dans certains cas, des cancers. (Code de santé et de sécurité de Californie, chapitre 25249.5 et suivants)

⚠ Ce produit contient des produits chimiques, notamment du plomb, dont l'État de Californie reconnaît qu'ils provoquent des cancers, des malformations congénitales ou d'autres problèmes de procréation. Se laver les mains après utilisation.

2-5. Principales normes de sécurité

2-6. Informations relatives aux CEM

Le courant électrique qui traverse tout conducteur génère des champs électromagnétiques (CEM) à certains endroits. Le courant issu d’un soudage à l’arc (et de procédés connexes, y compris le soudage par points, le gougeage, le découpage plasma et les opérations de chauffage par induction) crée un champ électromagnétique (CEM) autour du circuit de soudage. Les CEM peuvent créer des interférences avec certains implants médicaux comme des stimulateurs cardiaques. Des mesures de protection pour les porteurs d’implants médicaux doivent être prises: Limiter par exemple tout accès aux passants ou procéder à une évaluation des risques individuels pour les soudeurs. Tous les soudeurs doivent appliquer les procédures suivantes pour minimiser l’exposition aux CEM provenant du circuit de soudage:

1. Rassembler les câbles en les torsadant ou en les attachant avec du ruban adhésif ou avec une housse.
2. Ne pas se tenir au milieu des câbles de soudage. Disposer les câbles d’un côté et à distance de l’opérateur.
3. Ne pas courber et ne pas entourer les câbles autour de votre corps.
4. Maintenir la tête et le torse aussi loin que possible du matériel du circuit de soudage.
5. Connecter la pince sur la pièce aussi près que possible de la soudure.
6. Ne pas travailler à proximité d’une source de soudage, ni s’asseoir ou se pencher dessus.
7. Ne pas souder tout en portant la source de soudage ou le dévidoir.

En ce qui concerne les implants médicaux :
Les porteurs d’implants doivent d’abord consulter leur médecin avant de s’approcher des opérations de soudage à l’arc, de soudage par points, de gougeage, du découpage plasma ou de chauffage par induction. Si le médecin approuve, il est recommandé de suivre les procédures précédentes.

Notes
4-6. Duty Cycle And Overheating For MIG

Duty Cycle is percentage of 10 minutes that unit can weld at rated load without overheating.

If unit overheats, output stops. Wait fifteen minutes for unit to cool. Reduce amperage or duty cycle before starting to weld again.

**NOTICE** – Exceeding duty cycle can damage unit and void warranty.

### Duty Cycle Chart

- **20% Duty Cycle At 110A**
  - 2 Minutes Welding
  - 8 Minutes Resting
- **100% Duty Cycle At 75A**
  - Continuous Welding

- **20% Duty Cycle At 150A**
  - 2 Minutes Welding
  - 8 Minutes Resting
- **100% Duty Cycle At 120A**
  - Continuous Welding

### Overheating

- **A or V**
- **Reduce Duty Cycle**

SECTION 5 – INSTALLATION

5-1. Selecting A Location

Special installation may be required where gasoline or volatile liquids are present – see NEC Article 511 or CEC Section 20.

- Lifting Handle
  Use handle to lift unit.
- Line Disconnect Device
  Locate unit near correct input power supply.

18 in. (460 mm)

5-2. Stick Welding Connections

Turn off unit and disconnect input power before making connections.

- Positive Weld Output Receptacle
- Negative Weld Output Receptacle
- Stick Electrode Holder And Cable
- Work Clamp And Cable

Connect stick electrode holder cable to the positive weld output receptacle, and connect work clamp to negative weld output receptacle.

Ensure all connections are tight.
5-3. TIG Welding Connections DCEN (Direct Current Electrode Negative)

⚠️ Turn off unit and disconnect input power before making connections.

1. Positive Weld Output Receptacle
2. Negative Weld Output Receptacle
3. TIG Torch And Cable
4. Work Clamp And Cable

Connect TIG torch cable to the negative weld output receptacle and connect work clamp to positive weld output receptacle.

Ensure all connections are tight.

5. Foot Control
6. Finger Tip Control
7. Remote Control Cable
8. Six Pin Remote Control Receptacle

Route control cable through MIG gun hole.

Connect foot control or finger tip control to six pin remote control receptacle.

9. TIG Shielding Gas Connection

Use Argon gas for TIG welding (see Section 5-7).
5-4. Process/Polarity Table

<table>
<thead>
<tr>
<th>Process</th>
<th>Polarity</th>
<th>Cable Connections</th>
</tr>
</thead>
<tbody>
<tr>
<td>GMAW – Solid wire with shielding gas</td>
<td>DCEP – Reverse polarity</td>
<td>Connect to positive (+) output receptacle</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Connect to negative (−) output receptacle</td>
</tr>
<tr>
<td>FCAW – Self-shielding wire – no shielding gas</td>
<td>DCEN – Straight Polarity</td>
<td>Connect to negative (−) output receptacle</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Connect to positive (+) output receptacle</td>
</tr>
</tbody>
</table>

5-5. Wire Welding Connections

- **MIG – DCEP (Direct Current Electrode Positive)**
  - Connect gun end to drive assembly (see Section 5-6).
  - Connect plug on end of cable to four pin receptacle inside unit.

- **Flux-Cored – DCEN (Direct Current Electrode Negative)**
  - Use 75/25 mix or CO₂ shielding gas for solid wire. Use Argon shielding gas for aluminum wire with spool gun (see Section 5-7).

**Important Notes:**
- Turn off unit and disconnect input power before making connections.
- Ensure all connections are tight.

Ref. 254 252-B / Ref. 254 249-C / Ref. 254 247-B

OM-253 392 Page 20
5-6. Wire Gun Connection Inside Unit

1 Gun Securing Knob
2 Gun Block
3 Gun Outlet Wire Guide
4 Gun End
5 Trigger Control Cable
6 Four Pin Trigger Control Cable Receptacle

Loosen knob. Insert end of gun through opening in front panel until gun end bottoms against gun block. Tighten knob.
Route trigger control cable through MIG gun hole. Connect plug on end of cable to four pin receptacle inside unit.

Be sure that gun end is tight against drive assembly.

Correct
Incorrect

Ref. 254 249-C
Ref. 801 987
5-7. Connecting Shielding Gas Supply

Obtain gas cylinder and chain to running gear, wall, or other stationary support so cylinder cannot fall and break off valve.

1. Cap
2. Cylinder Valve

Remove cap, stand to side of valve, and open valve slightly. Gas flow blows dust and dirt from valve. Close valve.

3. Cylinder
4. Regulator/Flowmeter

Install so face is vertical.

5. Regulator/Flowmeter Gas Hose Connection
6. Welding Power Source CO₂ And Mixed Gas Hose Connection
7. Welding Power Source Argon Gas Hose Connection

Connect gas hose between regulator/flowmeter gas hose connection, and the appropriate fitting for the gas type on rear of welding power source.

8. Flow Adjust

Typical flow rate for CO₂ shielding gas and MIG (GMAW) welding is 15 to 30 cfh (cubic feet per hour) and mixed gas is 25 to 45 cfh.

Typical flow rate for Argon shielding gas and TIG (GTAW) welding is 15 to 25 cfh and aluminum MIG (GMAW) welding is 35 to 45 cfh.

Check wire manufacturer’s recommended flow rate.

9. CO₂ Adapter (Customer Supplied)

10. O-Ring (Customer Supplied)

Install adapter with O-ring between regulator/flowmeter and CO₂ cylinder.

Tools Needed:

Ref. 804 654-A / 254 247-B
5-8. Multi-Voltage Plug (MVP) Connection

Selecting Plug

1 Power Cord Connector From Welding Power Source
Select plug for power supply receptacle available at site. Not all plugs shown are provided as standard with unit.

2 Plug – NEMA Type 5–15P

3 Receptacle – NEMA Type 5–15R (Customer Supplied)

4 Plug – NEMA Type 5–20P (Optional)

5 Receptacle – NEMA Type 5–20R (Customer Supplied)

6 Plug – NEMA Type 6–50P

7 Receptacle – NEMA Type 6–50R (Customer Supplied)

Connecting Plug To Power Cord

Align arrow on plug with arrow on power cord connector. Push together.

Tighten threaded collar. As threaded collar is tightened, push plug onto adapter until collar is completely tight.

Connect plug to receptacle.

Do not cut off power cord connector and rewire. The power cord connector and plugs will work with standard NEMA receptacles. Modifying power cord, connector, and plugs will void product warranty.

Follow electrical service guide for 230 VAC in Section 5-9. Do not use plug rating to size branch circuit protection.
5-9. Electrical Service Guide

Failure to follow these electrical service guide recommendations could create an electric shock or fire hazard. These recommendations are for a dedicated circuit sized for the rated output and duty cycle of the welding power source.

In dedicated circuit installations, the National Electrical Code (NEC) allows the receptacle or conductor rating to be less than the rating of the circuit protection device. All components of the circuit must be physically compatible. See NEC articles 210.21, 630.11, and 630.12.

Actual input voltage should not exceed ± 10% of indicated required input voltage. If actual input voltage is outside of this range, output may not be available.

Reference: 2014 National Electrical Code (NEC) (including article 630)

1 If a circuit breaker is used in place of a fuse, choose a circuit breaker with time-current curves comparable to the recommended fuse.
2 “Time-Delay” fuses are UL class “RK5”. See UL 248.
3 “Normal Operating” (general purpose - no intentional delay) fuses are UL class “K5” (up to and including 60 amps), and UL class “H” (65 amps and above).
4 Conductor data in this section specifies conductor size (excluding flexible cord or cable) between the panelboard and the equipment per NEC Table 310.15(B)(16). If a flexible cord or cable is used, minimum conductor size may increase. See NEC Table 400.5(A) for flexible cord and cable requirements.

5-11. Connecting 115 Volt Input Power

- Installation must meet all National and Local Codes – have only qualified persons make this installation.
- Special installation may be required where gasoline or volatile liquids are present – see NEC Article 511 or CEC Section 20.

**NOTICE** – The Auto-Line circuitry in this unit automatically links the power source to the primary voltage being applied, either 115 or 230 VAC.

See rating label on unit and check input voltage available at site.

For 115 volts AC input power, a 15 or 20 ampere individual branch circuit protected by time-delay fuses or circuit breaker is required.

1 Multi-Voltage Plug And Power Cord Connector (NEMA Type 5-15P Plug Shown)

For multi-voltage plug connections, see Section 5-8.

1 Plug From Unit
2 Receptacle – NEMA Type 5-15R (Customer Supplied)
5-12. Connecting 1-Phase Input Power For 230 VAC

Tools Needed:

= GND/PE Earth Ground

230 VAC, 1 ~
installation must meet all National and Local Codes – have only qualified persons make this installation.

disconnect and lockout/tagout input power before connecting input conductors from unit. follow established procedures regarding the installation and removal of lockout/tagout devices.

always connect green or green/yellow conductor to supply grounding terminal first, and never to a line terminal.

NOTICE – the Auto-Line circuitry in this unit automatically links the power source to the primary voltage being applied, either 115 or 230 VAC.

see rating label on unit and check input voltage available at site.

1. Input Power Cord
2. Disconnect Device (switch shown in the OFF position)
3. Disconnect Device Grounding Terminal
4. Disconnect Device Line Terminals
5. Black And White Input Conductor (L1 and L2)
6. Green Or Green/Yellow Grounding Conductor

connect green or green/yellow grounding conductor to disconnect device grounding terminal first.

connect input conductors L1 and L2 to disconnect device line terminals.

7. Over-Current Protection

Select type and size of over-current protection using Section 5-9 (fused disconnect switch shown).

8. Receptacle (NEMA 6-50R)

Customer Supplied

Close and secure door on disconnect device. Remove lockout/tagout device, and place switch in the On position.

Notes

Work like a Pro!

Pros weld and cut safely. Read the safety rules at the beginning of this manual.
5-13. Installing Wire Spool And Adjusting Hub Tension

Tools Needed:

1. Wire Spool
2. Retaining Nut [For 8 in. (203 mm) Spool Only]

Installing 4 in. (102 mm) Wire Spool

When a slight force is needed to turn spool, tension is set.

Installing 8 in. (203 mm) Wire Spool

When a slight force is needed to turn spool, tension is set.

Adapter used with 8 in. (203 mm) spool only.

Align locking hole in spool with locking pin on spool hub.

Retaining ring used with 8 in. (203 mm) spool only.
5-14. Threading Welding Wire

Tools Needed:

Hold wire tightly to keep it from unraveling.

Open pressure assembly.

Pull and hold wire; cut off end.

Push wire thru guides into gun; continue to hold wire.

Close and tighten pressure assembly, and let go of wire.

Remove gun nozzle and contact tip. Turn On.

Press gun trigger until wire comes out of gun. Reinstall contact tip and nozzle

Feed wire to check drive roll pressure. Tighten knob enough to prevent slipping.

Cut off wire. Close and latch door.

Use pressure indicator scale to set a desired drive roll pressure. Begin with a setting of 2. If necessary, make additional adjustments after trying this initial setting.

Tighten 1 2 3 4

Pressure Indicator Scale

Tighten 1 2 3 4

A complete Parts List is available at www.MillerWelds.com
SECTION 6 – OPERATION

6-1. Controls

1. Process Select Knob
   Turn knob to select the desired welding process.

2. Auto-Set Button
   Press button to turn Auto-Set On or Off.

3. Wire/Rod/Tungsten Buttons
   Press the Plus (+) or Minus (-) button to select the size of wire, rod, or tungsten for the selected process.
   - When MIG Aluminum process is selected, Wire/Rod/Tungsten buttons are used to select type of spool gun being used.

4. Material Thickness Buttons
   Press the Plus (+) or Minus (-) button to select material thickness for the selected process.

5. Display

6. Adjustment Knob

7. Power Switch
   Use switch to turn unit On or Off.

Rear View

6-3. Entering Setup Menu

1. Wire/Rod/Tungsten Minus (−) Button
2. Material Thickness Plus (+) Button
3. Display

When unit is turned off, press and hold Wire/Rod/Tungsten Minus (−) button and Material Thickness Plus (+) button simultaneously.

Turn unit power on.

When Display shows MULTIMATIC 200 setup screen, release the two buttons simultaneously.

The contrast adjustment screen should be displayed.
6-4. Adjusting Display Contrast (Menu 1 Of 10)

Follow instructions in Section 6-3 to enter the setup menu.

The Display Contrast should now appear on the display.

To adjust display contrast, turn either Adjustment knob.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.

6-5. Calibrating Drive Motor (Menu 2 Of 10)

The unit's internal drive motor is calibrated at the factory. No calibration is needed unless drive motor or user interface board is changed. Contact nearest factory authorized Service Agent or Miller Electric Mfg. Co. Service department.
6-6. Calibrating Spoolmate 100 Or Spoolmate 150 (Menu 3 Of 10)

Connect Spoolmate to unit. Cut wire flush at nozzle.

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button twice after entering setup to enter the Spoolmate Calibration menu.

To perform a Spoolmate calibration 24 in. runout test at 100 ipm, turn left Adjustment knob and verify that a (✓) check mark appears next to 100 IPM. Be sure that wire is cut flush at nozzle, then trigger the Spoolmate.

Spoolmate will feed approximately 24 in. of wire through gun. Cut wire flush at nozzle and measure run-out.

If wire is not 24 inches long, use left Adjustment knob to increase or decrease the length of the run-out and repeat the test.

To perform a Spoolmate calibration 24 in. runout test at 300 ipm, turn right Adjustment knob and verify that a (✓) check mark appears next to 300 IPM. Be sure that wire is cut flush at nozzle, then trigger the Spoolmate.

Spoolmate will feed approximately 24 in. of wire through gun. Cut wire flush at nozzle and measure run-out.

If wire is not 24 inches long, use right Adjustment knob to increase or decrease the length of the run-out and repeat the test.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.
6-7. Enable/Disable Auto–Crater™ (Menu 4 Of 10)

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button three times after entering setup to enter the Auto–Crater feature menu.

Auto–Crater is disabled by default.

Rotate adjustment knob clockwise to enable Auto–Crater.

Rotate adjustment knob counterclockwise to disable Auto–Crater.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.
6-8. Viewing Burn-In Information (Menu 5 Of 10)

Burn-In information is for factory and service use only.

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button four times after entering setup to enter the Burn-In information screen.

Burn-In information displays electrical information unique to the unit.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.

6-9. Viewing Software Information (Menu 6 Of 10)

Software information is for factory and service use only.

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button five times after entering setup to enter the Software information screen.

Software information displays software information unique to the unit.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.

6-10. Viewing Primary Power Information (Menu 7 Of 10)

Primary Power information is for factory and service use only.

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button six times after entering setup to enter the Primary Power Logs screen.

Primary Power Logs screen displays unit power on time.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.

Notes

Work like a Pro!

Pros weld and cut safely. Read the safety rules at the beginning of this manual.
6-11. Viewing Process Logs (Menu 8 Of 10)

Follow instructions in Section 6-3 to enter the setup menu. Press Material Thickness Plus (+) button seven times after entering setup to enter the Process Logs screen.

Process Logs screen displays manual minutes, Auto-Set minutes, weld cycles, and Auto-Set cycles for the selected process.

To view other processes, use the Process Select knob to select the desired weld process.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.
6-12. Viewing Error Logs (Menu 9 Of 10)

Follow instructions in Section 6-3 to enter the setup menu.
Press Material Thickness Plus (+) button eight times after entering setup to enter the Process Logs screen.

Error Logs screen displays unit over-temperature errors, shorted output errors, shorted trigger errors, input voltage errors, and input current errors.

Cycle through menu items using the Material Thickness Plus (+) button or cycle unit power to save settings and exit menu.

Cycle unit power before welding to complete initialization process.
6-13. Performing A Factory Reset (Menu 10 Of 10)

A Factory Reset will reset the primary log data, process log data, and error log data. Contrast settings, motor calibration settings, Spoolmate Calibration settings, Burn-In information, and Software information will all be retained.

Follow instructions in Section 6-3 to enter the setup menu.

Press Material Thickness Plus (+) button nine times after entering setup to enter the Factory Reset screen.

To perform a Factory Reset, press the Auto-Set button. To exit this screen without performing a factory reset, press the Material Thickness Plus (+) button.

Cycle unit power before welding to complete initialization process.
## SECTION 7 – MAINTENANCE & TROUBLESHOOTING

### 7-1. Routine Maintenance

<table>
<thead>
<tr>
<th>Every 3 Months</th>
<th>Every 6 Months</th>

</thead>
</table>

### 7-2. Overload Protection

1. Supplementary Protector CB1
   - CB1 protects unit from overload. If CB1 opens, unit shuts down.
   - Reset supplementary protector.

![Diagram of the unit with a supplementary protector CB1 labeled](253 923-B)
7-3. Changing Drive Roll Or Wire Inlet Guide

1 Inlet Wire Guide
   Remove guide by pressing on barbed area or cutting off one end near housing and pulling it out of hole. Push new guide into hole from rear until it snaps in place.

2 Drive Roll
   The drive roll includes three different sized grooves. The text aligned with the drive roll retaining pin indicates the selected groove (see Section 5-14).

3 Retaining Pin
   To secure drive roll, locate open slot and push drive roll completely over retaining pin, then rotate drive roll to desired slot.

7-4. Error Messages

<table>
<thead>
<tr>
<th>Message</th>
<th>Error</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>NETWORK 1 ERROR</td>
<td>The two microcontrollers on the control board are no longer communicating.</td>

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>No weld output; unit completely inoperative.</td>
<td>Place line disconnect switch in On position. Check and replace line fuse(s), if necessary, or reset supplementary protector. Be sure power cord is plugged in and that receptacle is receiving input power.</td>
</tr>
<tr>
<td>No weld output; unit is on.</td>
<td>Check and secure loose weld cable(s) into receptacle(s). Check and correct poor connection of work clamp to workpiece. Unit overheated causing thermal shutdown. Allow unit to cool with fan On (see Section 4-6,4-7 and 4-8). Reduce duty cycle or amperage. Check and correct blocked/poor airflow to unit (see Section 5-1). Turn Power Off and back On again. If light continues to flash, check with Factory Authorized Service Agent. Line voltage too high or too low. Line voltage must be within ±10%. Remote trigger left on. Turn off remote trigger, wait five seconds, and restart operation.</td>
</tr>
<tr>
<td>Erratic or improper welding arc or output.</td>
<td>Use proper size and type of weld cable (see your Distributor). Clean and tighten weld connections. Verify electrode polarity; check and correct poor connections to workpiece.</td>
</tr>
<tr>
<td>Fan not operating.</td>
<td>Unit not warmed up enough to require fan cooling. Check for and remove anything blocking fan movement. Have Factory Authorized Service Agent check fan motor and control circuitry.</td>
</tr>
<tr>
<td>Stick welding problems: Hard starts; poor welding characteristics; unusual spattering.</td>
<td>Use proper type and size of electrode. Verify electrode polarity; check and correct poor connections. Make sure a remote control is not connected.</td>
</tr>
<tr>
<td>TIG welding problems: Wandering arc; hard starts; poor welding characteristics; spattering problems.</td>
<td>Use proper type and size of tungsten. Use properly prepared tungsten. Verify electrode polarity.</td>
</tr>
<tr>
<td>TIG welding problems: Tungsten electrode oxidizing and not remaining bright after welding.</td>
<td>Shield weld zone from drafts. Check for correct type shielding gas. Check and tighten gas fittings. Verify electrode polarity.</td>
</tr>
</tbody>
</table>
SECTION 8 - ELECTRICAL DIAGRAM

**WARNING**
- Do not touch live electrical parts.
- Disconnect input power or stop engine before servicing.
- Do not operate with covers removed.
- Have only qualified persons install, use, or service this unit.

9-1. Typical GMAW (MIG) Process Connections

Weld current can damage electronic parts in vehicles. Disconnect both battery cables before welding on a vehicle. Place work clamp as close to the weld as possible.

9-2. Typical GMAW (MIG) Process Control Settings

These settings are guidelines only. Material and wire type, joint design, fitup, position, shielding gas, etc. affect settings. Test welds to be sure they comply to specifications.

Convert Material Thickness to Amperage (A)

(0.001 in. = 1 ampere)
0.125 in. = 125 A

1/8 or 0.125 in.

Select Wire Speed

Select Wire (Amperage)

Select Voltage

Voltage controls height and width of weld bead.

Wire speed (amperage) controls weld penetration (wire speed = burn-off rate)

Low voltage: wire stubs into work
High voltage: arc is unstable (spatter)
Set voltage midway between high/low voltage
9-3. Holding And Positioning Welding Gun

Welding wire is energized when gun trigger is pressed. Before lowering helmet and pressing trigger, be sure wire is no more than 1/2 in. (13 mm) past end of nozzle, and tip of wire is positioned correctly on seam.

1. Hold Gun and Control Gun Trigger
2. Workpiece
3. Work Clamp
4. Electrode Extension (Stickout)
   Solid Wire – 3/8 to 1/2 in. (9 to 13 mm)
5. Cradle Gun and Rest Hand on Workpiece

9-4. Conditions That Affect Weld Bead Shape

Weld bead shape depends on gun angle, direction of travel, electrode extension (stickout), travel speed, thickness of base metal, wire feed speed (weld current), and voltage.
9-5. Gun Movement During Welding

Normally, a single stringer bead is satisfactory for most narrow groove weld joints; however, for wide groove weld joints or bridging across gaps, a weave bead or multiple stringer beads works better.

1. Stringer Bead – Steady Movement Along Seam
2. Weave Bead – Side To Side Movement Along Seam
3. Weave Patterns
   Use weave patterns to cover a wide area in one pass of the electrode.

9-6. Poor Weld Bead Characteristics

1. Large Spatter Deposits
2. Rough, Uneven Bead
3. Slight Crater During Welding
4. Bad Overlap
5. Poor Penetration

9-7. Good Weld Bead Characteristics

1. Fine Spatter
2. Uniform Bead
3. Moderate Crater During Welding
4. No Overlap
5. Good Penetration into Base Metal
### 9-8. Troubleshooting – Excessive Spatter

**Excessive Spatter** – scattering of molten metal particles that cool to solid form near weld bead.

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wire feed speed too high.</td>
<td>Select lower wire feed speed.</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>Use a more highly deoxidizing welding wire (contact supplier).</td>
</tr>
<tr>
<td>Welding wire extends too far out of nozzle.</td>
<td>Be sure welding wire extends not more than 1/2 in. (13 mm) beyond nozzle.</td>
</tr>
</tbody>
</table>

### 9-10. Troubleshooting – Excessive Penetration

**Excessive Penetration** – weld metal melting through base metal and hanging underneath weld.

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive heat input.</td>
<td>Select lower voltage range and reduce wire feed speed.</td>
</tr>
<tr>
<td></td>
<td>Increase travel speed.</td>
</tr>
</tbody>
</table>
9-11. Troubleshooting – Lack Of Penetration

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improper joint preparation.</td>
<td>Material too thick. Joint preparation and design must provide access to bottom of groove while maintaining proper welding wire extension and arc characteristics.</td>
</tr>
<tr>
<td>Improper weld technique.</td>
<td>Maintain normal gun angle of 0 to 15 degrees to achieve maximum penetration.</td>
</tr>
<tr>
<td></td>
<td>Keep arc on leading edge of weld puddle.</td>
</tr>
<tr>
<td></td>
<td>Be sure welding wire extends not more than 1/2 in. (13 mm) beyond nozzle.</td>
</tr>
<tr>
<td>Insufficient heat input.</td>
<td>Select higher wire feed speed and/or select higher voltage range.</td>
</tr>
<tr>
<td></td>
<td>Reduce travel speed.</td>
</tr>
<tr>
<td>Incorrect polarity.</td>
<td>Check polarity required by welding wire, and change to correct polarity at welding power source.</td>
</tr>
</tbody>
</table>

9-12. Troubleshooting – Incomplete Fusion

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Workpiece dirty.</td>
<td>Remove all grease, oil, moisture, rust, paint, undercoating, and dirt from work surface before welding.</td>
</tr>
<tr>
<td>Insufficient heat input.</td>
<td>Select higher voltage range and/or adjust wire feed speed.</td>
</tr>
<tr>
<td>Improper welding technique.</td>
<td>Place stringer bead in proper location(s) at joint during welding.</td>

<tr>
<td></td>
<td>Momentarily hold arc on groove side walls when using weaving technique.</td>
</tr>
<tr>
<td></td>
<td>Keep arc on leading edge of weld puddle.</td>
</tr>
<tr>
<td></td>
<td>Use correct gun angle of 0 to 15 degrees.</td>
</tr>
</tbody>
</table>

9-13. Troubleshooting – Burn-Through

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive heat input.</td>
<td>Select lower voltage range and reduce wire feed speed.</td>
</tr>
<tr>
<td></td>
<td>Increase and/or maintain steady travel speed.</td>
</tr>
</tbody>
</table>
9-14. Troubleshooting – Waviness Of Bead

Waviness Of Bead – weld metal that is not parallel and does not cover joint formed by base metal.

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Welding wire extends too far out of nozzle.</td>
<td>Be sure welding wire extends not more than 1/2 in. (13 mm) beyond nozzle.</td>
</tr>
<tr>
<td>Unsteady hand.</td>
<td>Support hand on solid surface or use two hands.</td>
</tr>
</tbody>
</table>

9-15. Troubleshooting – Distortion

Distortion – contraction of weld metal during welding that forces base metal to move.

<table>
<thead>
<tr>
<th>Possible Causes</th>
<th>Corrective Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive heat input.</td>
<td>Use restraint (clamp) to hold base metal in position.</td>
</tr>
<tr>

10-1. Stick Welding Procedure

**Tools Needed:**
- Wire brush
- Chipping hammer

**Equipment Needed:**
- Constant Current Welding Power Source
- Electrode holder
- Work clamp

**Weld current starts when electrode touches work-piece.**

**Weld current can damage electronic parts in vehicles.** Disconnect both battery cables before welding on a vehicle. Place work clamp as close to the weld as possible.

**Always wear appropriate personal protective clothing.**

1. **Workpiece**
   - Make sure workpiece is clean before welding.

2. **Work Clamp**
   - Place as close to the weld as possible.

3. **Electrode**
   - Before striking an arc, insert an electrode in the electrode holder. A small diameter electrode requires less current than a large one. Follow recommendations of the electrode manufacturer when setting weld amperage (see Section 10-2).

4. **Insulated Electrode Holder**

5. **Electrode Holder Position**

6. **Arc Length**
   - Arc length is the distance from the electrode to the workpiece. A short arc with correct amperage will give a sharp, crackling sound. Correct arc length is related to electrode diameter. Examine the weld bead to determine if the arc length is correct.
   - Arc length for 1/16 and 3/32 in. diameter electrodes should be about 1/16 in. (1.6 mm); arc length for 1/8 and 5/32 in. electrodes should be about 1/8 in. (3 mm).

7. **Slag**
   - Use a chipping hammer and wire brush to remove slag. Remove slag and check weld bead before making another weld pass.

---

### 10-3. Striking an Arc

- **Weld current starts when electrode touches workpiece.**
- 1. Electrode
- 2. Workpiece
- 3. Arc

**Scratch Technique**

Drag electrode across workpiece like striking a match; lift electrode slightly after touching work. If arc goes out, electrode was lifted too high. If electrode sticks to workpiece, use a quick twist to free it.

**Tapping Technique**

Bring electrode straight down to workpiece; then lift slightly to start arc. If arc goes out, electrode was lifted too high. If electrode sticks to workpiece, use a quick twist to free it.
10-4. Positioning Electrode Holder

1. End View Of Work Angle
2. Side View Of Electrode Angle

After learning to start and hold an arc, practice running beads of weld metal on flat plates using a full electrode.

Hold the electrode nearly perpendicular to the work, although tilting it ahead (in the direction of travel) will be helpful.

To produce the best results, hold a short arc, travel at a uniform speed, and feed the electrode downward at a constant rate as it melts.

Groove Welds

Fillet Welds

10-5. Poor Weld Bead Characteristics

1. Large Spatter Deposits
2. Rough, Uneven Bead
3. Slight Crater During Welding
4. Bad Overlap
5. Poor Penetration

10-6. Good Weld Bead Characteristics

1. Fine Spatter
2. Uniform Bead
3. Moderate Crater During Welding
4. No Overlap
5. Good Penetration into Base Metal

Weld a new bead or layer for each 1/8 in. (3.2 mm) thickness in metals being welded.
10-7. Conditions That Affect Weld Bead Shape

Weld bead shape is affected by electrode angle, arc length, travel speed, and thickness of base metal.

Electrode Angle
- Angle Too Small
- Correct Angle: 10° - 30°
- Angle Too Large

Arc Length
- Too Short
- Normal
- Too Long

Travel Speed
- Slow
- Normal
- Fast

10-8. Electrode Movement During Welding

Normally, a single stringer bead is satisfactory for most narrow groove weld joints; however, for wide groove weld joints or bridging across gaps, a weave bead or multiple stringer beads work better.

1 Stringer Bead – Steady Movement Along Seam
2 Weave Bead – Side to Side Movement Along Seam
3 Weave Patterns

Use weave patterns to cover a wide area in one pass of the electrode. Do not let weave width exceed 2-1/2 times diameter of electrode.

10-9. Welding Lap Joints

1 Electrode
2 Single-Layer Fillet Weld
Move electrode in circular motion.
3 Multi-Layer Fillet Weld
Weld a second layer when a heavier fillet is needed. Remove slag before making another weld pass. Weld both sides of joint for maximum strength.
10-10. Welding Groove (Butt) Joints

1 Tack Welds
Prevent butt joint distortion by tack welding the materials in position before final weld.

Workpiece distortion occurs when heat is applied locally to a joint. One side of a metal plate will “curl” up toward the weld. Distortion will also cause the edges of a butt joint to pull together ahead of the electrode as the weld cools.

2 Square Groove Weld
3 Single V-Groove Weld
4 Double V-Groove Weld
Materials up to 3/16 in. (5 mm) thick can often be welded without special preparation using the square groove weld. However, when welding thicker materials it may be necessary to prepare the edges (V-groove) of butt joints to ensure good welds.

The single or double V-groove weld is good for materials 3/16 – 3/4 in. (5-19 mm) thick. Generally, the single V-groove is used on materials up to 3/4 in. (19 mm) thick and when, regardless of thickness, you can weld from one side only. Create a 30 degree bevel with oxy-acetylene or plasma cutting equipment. Remove scale from material after cutting. A grinder can also be used to prepare bevels.

10-11. Welding Tee Joints

1 Electrode
2 Fillet Weld
Keep arc short and move at definite rate of speed. Hold electrode as shown to provide fusion into the corner. Square edge of the weld surface.

For maximum strength weld both sides of upright section.

3 Multi-Layer Deposits
Weld a second layer when a heavier fillet is needed. Use any of the weaving patterns shown in Section 10-8. Remove slag before making another weld pass.
10-12. Weld Test

1 Vise
2 Weld Joint
3 Hammer

Strike the weld joint in the direction shown. A good weld bends over but does not break.

If the weld breaks, examine it to determine the cause.
If the weld is porous (many holes), the arc length was probably too long.
If the weld contains bits of slag, the arc may have been too long or the electrode was moved incorrectly which allowed molten slag to be trapped in the weld. This may happen on a V-groove joint made in several layers and calls for additional cleaning between layers.
If the original beveled surface is visible the material was not fully melted which is often caused by insufficient heat or too fast a travel speed.

2 To 3 in. (51-76 mm)
1/4 in. (6.4 mm)

SECTION 11 – SELECTING AND PREPARING A TUNGSTEN FOR DC OR AC WELDING WITH INVERTER MACHINES

11-1. Selecting Tungsten Electrode (Wear Clean Gloves To Prevent Contamination Of Tungsten)

Not all tungsten electrode manufacturers use the same colors to identify tungsten type. Contact the tungsten electrode manufacturer or reference the product packaging to identify the tungsten you are using.

</table>

Typical argon shielding gas flow rates are 11 to 35 CFH (cubic feet per hour). Figures listed are a guide and are a composite of recommendations from American Welding Society (AWS) and electrode manufacturers.

11-2. Preparing Tungsten Electrode For DC Electrode Negative (DCEN) Welding Or AC Welding With Inverter Machines

Grinding the tungsten electrode produces dust and flying sparks which can cause injury and start fires. Use local exhaust (forced ventilation) at the grinder or wear an approved respirator. Read MSDS for safety information. Consider using tungsten containing ceria, lanthana, or yttria instead of thoria. Grinding dust from thoriated electrodes contains low-level radioactive material. Properly dispose of grinder dust in an environmentally safe way. Wear proper face, hand, and body protection. Keep flammables away.

![Diagram of tungsten electrode preparation](image)
SECTION 12 – GUIDELINES FOR TIG WELDING (GTAW)

12-1. Positioning The Torch

Grinding the tungsten electrode produces dust and flying sparks which can cause injury and start fires. Use local exhaust (forced ventilation) at the grinder or wear an approved respirator. Read MSDS for safety information. Consider using cerium or lanthanum based tungsten instead of thoriated. Thorium dust contains low-level radioactive material. Properly dispose of grinder dust in an environmentally safe way. Wear proper face, hand, and body protection. Keepflammables away.

1 Workpiece
Make sure workpiece is clean before welding.

2 Work Clamp
Place as close to the weld as possible.

3 Torch

4 Filler Rod (If Applicable)

5 Gas Cup

6 Tungsten Electrode
Select and prepare tungsten according to Section 11.

Guidelines:
The inside diameter of the gas cup should be at least three times the tungsten diameter to provide adequate shielding gas coverage. (For example, if tungsten is 1/16 in. diameter, gas cup should be a minimum of 3/16 in. diameter.

Tungsten extension is the distance the tungsten extends out gas cup of torch.

The tungsten extension should be no greater than the inside diameter of the gas cup.

Arc length is the distance from the tungsten to the workpiece.
12-2. Torch Movement During Welding

**Tungsten Without Filler Rod**
- **Welding direction**
  - Form pool
  - Tilt torch
  - Move torch to front of pool. Repeat process.

**Tungsten With Filler Rod**
- **Welding direction**
  - Form pool
  - Tilt torch
  - Add filler metal
  - Move torch to front of pool. Repeat process.

12-3. Positioning Torch Tungsten For Various Weld Joints

**Butt Weld And Stringer Bead**

Notes

Work like a Pro!
Pros weld and cut safely. Read the safety rules at the beginning of this manual.
LIMITED WARRANTY - Subject to the terms and conditions below, Miller Electric Mfg. Co., Appleton, Wisconsin, warrants to its original retail purchaser that new Miller equipment sold after the effective date of this limited warranty is free of defects in material and workmanship at the time it is shipped by Miller. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS. Within the warranty periods listed below, Miller will repair or replace any warranted parts or components that fail due to such defects in material or workmanship. Miller must be notified in writing within thirty (30) days of such defect or failure, at which time Miller will provide instructions on the warranty claim procedures to be followed. If notification is submitted as an online warranty claim, the claim must include a detailed description of the fault and the troubleshooting steps taken to identify failed components and the cause of their failure.

Miller shall honor warranty claims on warranted equipment listed below in the event of such a failure within the warranty time periods. All warranty time periods start on the delivery date of the equipment to the original end-user purchaser, and not to exceed twelve months after the equipment is shipped to a North American distributor or eighteen months after the equipment is shipped to an International distributor.

1. **5 Years Parts — 3 Years Labor**
   - Original Main Power Rectifiers Only to Include SCRs, Diodes, and Discrete Rectifier Modules

2. **3 Years — Parts and Labor**
   - Auto-Darkening Helmet Lenses (Except Classic Series) (No Labor)
   - Engine Driven Welder/Generators
   
   (NOTE: Engines are Warranted Separately by the Engine Manufacturer.)
   - Inverter Power Sources (Unless Otherwise Stated)
   - Plasma Arc Cutting Power Sources
   - Process Controllers
   - Semi-Automatic and Automatic Wire Feeders
   - Transformer/Rectifier Power Sources

3. **2 Years — Parts and Labor**
   - Auto-Darkening Helmet Lenses – Classic Series Only (No Labor)
   - Fume Extractors – Capture 5, Filtair 400 and Industrial Collector Series

4. **1 Year — Parts and Labor Unless Specified**
   - Automatic Motion Devices
   - CoolBelt and CoolBand Blower Unit (No Labor)
   - Desiccant Air Dryer System
   - External Monitoring Equipment and Sensors
   - Field Options
   
   (NOTE: Field options are covered for the remaining warranty period of the product they are installed in, or for a minimum of one year — whichever is greater.)
   - RFCS Foot Controls (Except RFCS-RJ45)
   - Fume Extractors – Filter 130, MWX and SWX Series
   - HF Units
   - ICE/XT Plasma Cutting Torches (No Labor)
   - Induction Heating Power Sources, Coolers
   
   (NOTE: Digital Recorders are Warranted Separately by the Manufacturer.)
   - LiveArc Welding Performance Management System
   - Load Banks
   - Motor-Driven Guns (except Spoolmate Spoolguns)
   - PAPR Blower Unit (No Labor)
   - Positioners and Controllers
   - Racks
   - Running Gear/Trailers
   - Spot Welders
   - Subarc Wire Drive Assemblies
   - Water Coolant Systems
   - TIG Torches (No Labor)
   - Wireless Remote Foot/Hand Controls and Receivers
   - Work Stations/Weld Tables (No Labor)

5. **6 Months — Parts**
   - Batteries
   - Bernard Guns (No Labor)
   - Tregaskiss Guns (No Labor)

6. **90 Days — Parts**
   - Accessory (Kits)
   - Canvas Covers
   - Induction Heating Coils and Blankets, Cables, and Non-Electronic Controls
   - M-Guns
   - MIG Guns and Subarc (SAW) Torches
   - Remote Controls and RFCS-RJ45
   - Replacement Parts (No labor)
   - Roughneck Guns
   - Spoolmate Spoolguns

Miller’s True Blue® Limited Warranty shall not apply to:

1. Consumable components; such as contact tips, cutting nozzles, contactors, brushes, relays, work station table tops and welding curtains, or parts that fail due to normal wear. (Exception: brushes and relays are covered on all engine-driven products.)

2. Items furnished by Miller, but manufactured by others, such as engines or trade accessories. These items are covered by the manufacturer’s warranty, if any.

3. Equipment that has been modified by any party other than Miller, or equipment that has been improperly installed, improperly operated or misused based upon industry standards, or equipment which has not had reasonable and necessary maintenance, or equipment which has been used for operation outside of the specifications for the equipment.

MILLER PRODUCTS ARE INTENDED FOR PURCHASE AND USE BY COMMERCIAL/INDUSTRIAL USERS AND PERSONS TRAINED AND EXPERIENCED IN THE USE AND MAINTENANCE OF WELDING EQUIPMENT.

In the event of a warranty claim covered by the warranty, the exclusive remedies shall be, at Miller’s option: (1) repair; or (2) replacement; or, where authorized in writing by Miller in appropriate cases, (3) the reasonable cost of repair or replacement at an authorized Miller service station; or (4) payment of or credit for the purchase price (less reasonable depreciation based upon actual use) upon return of the goods at customer’s risk and expense. Miller’s option of repair or replacement will be made on the basis of new miller product, not an “as is” basis. Miller reserves the right to repair or replace any warranted parts or components that fail due to normal wear. (Exception: brushes and relays are covered on all engine-driven products.)

In the event of a warranty claim covered by the warranty, the exclusive remedies shall be, at Miller’s option: (1) repair; or (2) replacement; or, where authorized in writing by Miller in appropriate cases, (3) the reasonable cost of repair or replacement at an authorized Miller service station; or (4) payment of or credit for the purchase price (less reasonable depreciation based upon actual use) upon return of the goods at customer’s risk and expense. Miller’s option of repair or replacement will be made on the basis of new miller product, not an “as is” basis. Miller reserves the right to repair or replace any warranted parts or components that fail due to normal wear. (Exception: brushes and relays are covered on all engine-driven products.)

Any express warranty not provided herein and any implied warranty, guaranty or representation as to performance, and any remedy for breach of contract tort or any other legal theory which, but for this provision, might arise by implication, operation of law, custom of trade or course of dealing, including any implied warranty of merchantability or fitness for a particular purpose, with respect to any and all equipment furnished by miller is excluded and disclaimed by MILLER.

Some states in the U.S.A. do not allow limitations of how long an implied warranty lasts, or the exclusion of incidental, indirect, special or consequential damages, so the above limitation or exclusion may not apply to you. This warranty provides specific legal rights, and other rights may be available, but may vary from state to state.

In Canada, legislation in some provinces provides for certain additional warranties or remedies other than as stated herein, and to the extent that they may not be waived, the limitations and exclusions set out above may not apply. This Limited Warranty provides specific legal rights, and other rights may be available, but may vary from province to province.
