Syncrowave® 250 DX / 350 LX
With Optional Running Gear And Cooler

OWNER’S MANUAL

File: TIG (GTAW)
Thank you and congratulations on choosing Miller. Now you can get the job done and get it done right. We know you don’t have time to do it any other way.

That’s why when Niels Miller first started building arc welders in 1929, he made sure his products offered long-lasting value and superior quality. Like you, his customers couldn’t afford anything less. Miller products had to be more than the best they could be. They had to be the best you could buy.

Today, the people that build and sell Miller products continue the tradition. They’re just as committed to providing equipment and service that meets the high standards of quality and value established in 1929.

This Owner’s Manual is designed to help you get the most out of your Miller products. Please take time to read the Safety precautions. They will help you protect yourself against potential hazards on the worksite.

We’ve made installation and operation quick and easy. With Miller you can count on years of reliable service with proper maintenance. And if for some reason the unit needs repair, there’s a Troubleshooting section that will help you figure out what the problem is. The parts list will then help you to decide the exact part you may need to fix the problem. Warranty and service information for your particular model are also provided.

Miller Electric manufactures a full line of welders and welding related equipment. For information on other quality Miller products, contact your local Miller distributor to receive the latest full line catalog or individual specification sheets. To locate your nearest distributor or service agency call 1-800-4-A-Miller, or visit us at www.MillerWelds.com on the web.
# TABLE OF CONTENTS

**SECTION 1 – SAFETY PRECAUTIONS - READ BEFORE USING**

1-1. Symbol Usage .......................................................... 1
1-2. Arc Welding Hazards .................................................. 1
1-3. Additional Symbols For Installation, Operation, And Maintenance ........................................ 3
1-4. California Proposition 65 Warnings .................................. 4
1-5. Principal Safety Standards ............................................. 4
1-6. EMF Information ........................................................ 4

**SECTION 2 – CONSIGNES DE SÉCURITÉ – LIRE AVANT UTILISATION**

2-1. Symboles utilisés ......................................................... 5
2-2. Dangers relatifs au soudage à l'arc .................................. 5
2-3. Dangers supplémentaires en relation avec l'installation, le fonctionnement et la maintenance ............. 7
2-4. Proposition californienne 65 Avertissements ......................... 8
2-5. Principales normes de sécurité ...................................... 8
2-6. Informations relatives aux CEM ...................................... 8

**SECTION 3 – DEFINITIONS**

3-1. Additional Safety Symbols And Definitions ................. 9
3-2. Miscellaneous Symbols And Definitions .................. 10

**SECTION 4 – SPECIFICATIONS**

4-1. Serial Number And Rating Label Location .................. 13
4-2. Cooler Specifications ................................................ 13
4-3. Coolant Specifications ............................................... 13
4-4. Welding Power Source Specifications ...................... 13
4-5. Duty Cycle And Overheating .................................... 15
4-6. Volt-Ampere Curves ................................................ 16
4-7. Dimensions And Weights .......................................... 17
4-8. Environmental Specifications .................................. 17

**SECTION 5 – INSTALLATION**

5-1. Selecting A Location ................................................. 19
5-2. Selecting Cable Sizes* ............................................. 20
5-3. Weld Output Terminals ............................................ 20
5-4. Remote 14 Receptacle Information ......................... 21
5-5. Shielding Gas Connections And 115 Volts AC Cooler Receptacle ............................................... 21
5-6. TIG Connections With A Two-Piece Air-Cooled Torch ............................................... 22
5-7. TIG Connections With A One-Piece Air-Cooled Torch .................................................. 22
5-8. Front Panel Display For TIG HF Impulse DCEN (Direct Current Electrode Negative) ................. 23
5-9. Front Panel Display For TIG AC .................................. 24
5-10. Optional Cooler Connections ................................. 25
5-11. Stick Connections .................................................. 26
5-12. Front Panel Display For Stick DCEP (Direct Current Electrode Positive) .................................. 27
5-13. Front Panel Display For Stick DCEN (Direct Current Electrode Positive) .................................. 28

6-7. Reconfiguring Trigger Hold For 4T And Mini Logic Control ................................................ 40
6-8. Selecting TIG Starting Characteristics Using Syncro-Start™ Technology .................................. 41
6-9. Start Mode ......................................................... 42
1-1. Symbol Usage

DANGER! - Indicates a hazardous situation which, if not avoided, will result in death or serious injury. The possible hazards are shown in the adjoining symbols or explained in the text.

Indicates a hazardous situation which, if not avoided, could result in death or serious injury. The possible hazards are shown in the adjoining symbols or explained in the text.

NOTICE – Indicates statements not related to personal injury.

1-2. Arc Welding Hazards

The symbols shown below are used throughout this manual to call attention to and identify possible hazards. When you see the symbol, watch out, and follow the related instructions to avoid the hazard. The safety information given below is only a summary of the more complete safety information found in the Safety Standards listed in Section 1-5. Read and follow all Safety Standards.

Only qualified persons should install, operate, maintain, and repair this unit.

During operation, keep everybody, especially children, away.

ELECTRIC SHOCK can kill.

Touching live electrical parts can cause fatal shocks or severe burns. The electrode and work circuit is electrically live whenever the output is on. The input power circuit and machine internal circuits are also live when power is on. In semiautomatic or automatic wire welding, the wire, wire reel, drive roll housing, and all metal parts touching the welding wire are electrically live. Incorrectly installed or improperly grounded equipment is a hazard.

Do not touch live electrical parts.

Wear dry, hole-free insulating gloves and body protection.

Insulate yourself from work and ground using dry insulating mats or covers big enough to prevent any physical contact with the work or ground.

Do not use AC output in damp areas, if movement is confined, or if there is a danger of falling.

Use AC output ONLY if required for the welding process.

If AC output is required, use remote output control if present on unit.

Additional safety precautions are required when any of the following electrically hazardous conditions are present: in damp locations or while wearing wet clothing; on metal structures such as floors, gratings, or scaffolds; when in cramped positions such as sitting, kneeling, or lying; or when there is a high risk of unavoidable or accidental contact with the workpiece or ground. For these conditions, use the following equipment in order presented: 1) a semiautomatic DC constant voltage (wire) welder, 2) a DC manual (stick) welder, or 3) an AC welder with reduced open-circuit voltage. In most situations, use of a DC, constant voltage welder is recommended. And, do not work alone!

Disconnect input power or stop engine before installing or servicing this equipment. Lockout/tagout input power according to OSHA 29 CFR 1910.147 (see Safety Standards).

Properly install, ground, and operate this equipment according to its Owner's Manual and national, state, and local codes.

Always verify the supply ground – check and be sure that input power cord ground wire is properly connected to ground terminal in disconnect box or that cord plug is connected to a properly grounded receptacle outlet.

When making input connections, attach proper grounding conductor first – double-check connections.

Keep cords dry, free of oil and grease, and protected from hot metal and sparks.

Frequently inspect input power cord and ground conductor for damage or bare wiring – replace immediately if damaged – bare wiring can kill.

Turn off all equipment when not in use.

Do not use worn, damaged, undersized, or repaired cables.

Do not drape cables over your body.

If earth grounding of the workpiece is required, ground it directly with a separate cable.

Do not touch electrode if you are in contact with the work, ground, or another electrode from a different machine.

Do not touch electrode holders connected to two welding machines at the same time since double open-circuit voltage will be present.

Use only well-maintained equipment. Repair or replace damaged parts at once. Maintain unit according to manual.

Wear a safety harness if working above floor level.

Keep all panels and covers securely in place.

Clamp work cable with good metal-to-metal contact to workpiece or worktable as near the weld as practical.

Inspect work clamp when not connected to workpiece to prevent contact with any metal object.

Do not connect more than one electrode or work cable to any single weld output terminal. Disconnect cable for process not in use.

Use GFCI protection when operating auxiliary equipment in damp or wet locations.

SIGNIFICANT DC VOLTAGE exists in inverter welding power sources AFTER removal of input power.

Turn Off inverter, disconnect input power, and discharge input capacitors according to instructions in Maintenance Section before touching any parts.

HOT PARTS can burn.

Do not touch hot parts bare handed.

Allow cooling period before working on equipment.

To handle hot parts, use proper tools and/or wear heavy, insulated welding gloves and clothing to prevent burns.
FUMES AND GASES can be hazardous. Welding produces fumes and gases. Breathing these fumes and gases can be hazardous to your health.

- Keep your head out of the fumes. Do not breathe the fumes.
- If inside, ventilate the area and/or use local forced ventilation at the arc to remove welding fumes and gases. The recommended way to determine adequate ventilation is to sample for the composition and quantity of fumes and gases to which personnel are exposed.
- If ventilation is poor, wear an approved air-supplied respirator.
- Read and understand the Safety Data Sheets (SDSs) and the manufacturer's instructions for adhesives, coatings, cleaners, consumables, coolants, degreasers, fluxes, and metals.
- Work in a confined space only if it is well ventilated, or while wearing an air-supplied respirator. Always have a trained watchperson nearby. Welding fumes and gases can displace air and lower the oxygen level causing injury or death. Be sure the breathing air is safe.
- Do not weld in locations near degreasing, cleaning, or spraying operations. The heat and rays of the arc can react with vapors to form highly toxic and irritating gases.
- Do not weld on coated metals, such as galvanized, lead, or cadmium plated steel, unless the coating is removed from the weld area. The area is well ventilated, and while wearing an air-supplied respirator. The coatings and any metals containing these elements can give off toxic fumes if welded.

ARC RAYS can burn eyes and skin. Arc rays from the welding process produce intense visible and invisible (ultraviolet and infrared) rays that can burn eyes and skin. Sparks fly off from the weld.

- Wear an approved welding helmet fitted with a proper shade of filter lenses to protect your face and eyes from arc rays and sparks when welding or watching (see ANSI Z49.1 and Z87.1 listed in Safety Standards).
- Wear approved safety glasses with side shields under your helmet.
- Use protective screens or barriers to protect others from flash, glare, and sparks; warn others not to watch the arc.
- Wear body protection made from durable, flame-resistant material (leather, heavy cotton, wool). Body protection includes oil-free clothing such as leather gloves, heavy shirt, cuffless trousers, high shoes, and a cap.

FLYING METAL or DIRT can injure eyes.

- Welding, chipping, wire brushing, and grinding cause sparks and flying metal. As welds cool, they can throw off slag.
- Wear approved safety glasses with side shields even under your welding helmet.

BUILDUP OF GAS can injure or kill.

- Shut off compressed gas supply when not in use.
- Always ventilate confined spaces or use approved air-supplied respirator.

ELECTRIC AND MAGNETIC FIELDS (EMF) can affect Implanted Medical Devices.

- Wearers of Pacemakers and other Implanted Medical Devices should keep away.
- Implanted Medical Device wearers should consult their doctor and the device manufacturer before going near arc welding, spot welding, gouging, plasma arc cutting, or induction heating operations.

NOISE can damage hearing.

- Wear approved ear protection if noise level is high.

CYLINDERS can explode if damaged.

- Protect compressed gas cylinders from excessive heat, mechanical shocks, physical damage, slag, open flames, sparks, and arcs.
- Install cylinders in an upright position by securing to a stationary support or cylinder rack to prevent falling or tipping.
- Keep cylinders away from any welding or other electrical circuits.
- Never drape a welding torch over a gas cylinder.
- Never allow a welding electrode to touch any cylinder.
- Never weld on a pressurized cylinder – explosion will result.
- Use only correct compressed gas cylinders, regulators, hoses, and fittings designed for the specific application; maintain them and associated parts in good condition.
- Turn face away from valve outlet when opening cylinder valve. Do not stand in front of or behind the regulator when opening the valve.
- Keep protective cap in place over valve except when cylinder is in use or connected for use.
- Use the right equipment, correct procedures, and sufficient number of persons to lift and move cylinders.
- Read and follow instructions on compressed gas cylinders, associated equipment, and Compressed Gas Association (CGA) publication P-1 listed in Safety Standards.

WELDING can cause fire or explosion. Welding on closed containers, such as tanks, drums, or pipes, can cause them to blow up. Sparks can fly off from the welding arc. The flying sparks, hot metal, and hot equipment can cause fires and burns. Accidental contact of electrode to metal objects can cause sparks, explosion, overheating, or fire. Check and be sure the area is safe before doing any welding.

- Remove all flammables within 35 ft (10.7 m) of the welding arc. If this is not possible, tightly cover them with approved covers.
- Do not weld where flying sparks can strike flammable material.
- Protect yourself and others from flying sparks and hot metal.
- Be alert that welding sparks and hot materials from welding can easily go through small cracks and openings to adjacent areas.
- Watch for fire, and keep a fire extinguisher nearby.
- Be aware that welding on a ceiling, floor, bulkhead, or partition can cause fire on the hidden side.
- Do not weld on containers that have held combustibles, or on closed containers such as tanks, drums, or pipes unless they are properly prepared according to AWS F4.1 and AWS A8.0 (see Safety Standards).
- Do not weld where the atmosphere can contain flammable dust, gas, or liquid vapors (such as gasoline).
- Connect work cable to the work as close to the welding area as practical to prevent welding current from traveling long, possibly unknown paths and causing electric shock, sparks, and fire hazards.
- Do not use welder to thaw frozen pipes.

- Remove stick electrode from holder or cut off welding wire at contact tip when not in use.
- Wear body protection made from durable, flame-resistant material (leather, heavy cotton, wool). Body protection includes oil-free clothing such as leather gloves, heavy shirt, cuffless trousers, high shoes, and a cap.
- Remove any combustibles, such as a butane lighter or matches, from your person before doing any welding.
- After completion of work, inspect area to ensure it is free of sparks, glowing embers, and flames.
- Use only correct fuses or circuit breakers. Do not oversize or bypass them.
- Follow requirements in OSHA 1910.252 (a) (2) (iv) and NFPA 51B for hot work and have a fire watcher and extinguisher nearby.
- Read and understand the Safety Data Sheets (SDSs) and the manufacturer's instructions for adhesives, coatings, cleaners, consumables, coolants, degreasers, fluxes, and metals.
1-3. **Additional Symbols For Installation, Operation, And Maintenance**

### FIRE OR EXPLOSION hazard.
- Do not install or place unit on, over, or near combustible surfaces.
- Do not install unit near flammables.
- Do not overload building wiring – be sure power supply system is properly sized, rated, and protected to handle this unit.

### FALLING EQUIPMENT can injure.
- Use lifting eye to lift unit only, NOT running gear, gas cylinders, or any other accessories.
- Use equipment of adequate capacity to lift and support unit.
- If using lift forks to move unit, be sure forks are long enough to extend beyond opposite side of unit.
- Keep equipment (cables and cords) away from moving vehicles when working from an aerial location.
- Follow the guidelines in the Applications Manual for the Revised NIOSH Lifting Equation (Publication No. 94–110) when manually lifting heavy parts or equipment.

### OVERUSE can cause OVERHEATING
- Allow cooling period; follow rated duty cycle.
- Reduce current or reduce duty cycle before starting to weld again.
- Do not block or filter airflow to unit.

### FLYING SPARKS can injure.
- Wear a face shield to protect eyes and face.
- Shape tungsten electrode only on grinder with proper guards in a safe location wearing proper face, hand, and body protection.
- Sparks can cause fires — keep flammables away.

### STATIC (ESD) can damage PC boards.
- Put on grounded wrist strap BEFORE handling boards or parts.
- Use proper static-proof bags and boxes to store, move, or ship PC boards.

### MOVING PARTS can injure.
- Keep away from moving parts.
- Keep away from pinch points such as drive rolls.

### WELDING WIRE can injure.
- Do not press gun trigger until instructed to do so.
- Do not point gun toward any part of the body, other people, or any metal when threading welding wire.

### BATTERY EXPLOSION can injure.
- Do not use welder to charge batteries or jump start vehicles unless it has a battery charging feature designed for this purpose.

### MOVING PARTS can injure.
- Keep away from moving parts such as fans.
- Keep all doors, panels, covers, and guards closed and securely in place.
- Have only qualified persons remove doors, panels, covers, or guards for maintenance and troubleshooting as necessary.
- Reinstall doors, panels, covers, or guards when maintenance is finished and before reconnecting input power.

### READ INSTRUCTIONS.
- Read and follow all labels and the Owner’s Manual carefully before installing, operating, or servicing unit. Read the safety information at the beginning of the manual and in each section.
- Use only genuine replacement parts from the manufacturer.
- Perform installation, maintenance, and service according to the Owner’s Manuals, industry standards, and national, state, and local codes.

### H.F. RADIATION can cause interference.
- High-frequency (H.F.) can interfere with radio navigation, safety services, computers, and communications equipment.
- Have only qualified persons familiar with electronic equipment perform this installation.
- The user is responsible for having a qualified electrician promptly correct any interference problem resulting from the installation.
- If notified by the FCC about interference, stop using the equipment at once.
- Have the installation regularly checked and maintained.
- Keep high-frequency source doors and panels tightly shut, keep spark gaps at correct setting, and use grounding and shielding to minimize the possibility of interference.

### ARC WELDING can cause interference.
- Electromagnetic energy can interfere with sensitive electronic equipment such as computers and computer-driven equipment such as robots.
- Be sure all equipment in the welding area is electromagnetically compatible.
- To reduce possible interference, keep weld cables as short as possible, close together, and down low, such as on the floor.
- Locate welding operation 100 meters from any sensitive electronic equipment.
- Be sure this welding machine is installed and grounded according to this manual.
- If interference still occurs, the user must take extra measures such as moving the welding machine, using shielded cables, using line filters, or shielding the work area.
1-4. California Proposition 65 Warnings

⚠️ Welding or cutting equipment produces fumes or gases which contain chemicals known to the State of California to cause birth defects and, in some cases, cancer. (California Health & Safety Code Section 25249.5 et seq.)

⚠️ This product contains chemicals, including lead, known to the state of California to cause cancer, birth defects, or other reproductive harm. Wash hands after use.

1-5. Principal Safety Standards

1-6. EMF Information

Electric current flowing through any conductor causes localized electric and magnetic fields (EMF). The current from arc welding (and allied processes including spot welding, gouging, plasma arc cutting, and induction heating operations) creates an EMF field around the welding circuit. EMF fields can interfere with some medical implants, e.g. pacemakers. Protective measures for persons wearing medical implants have to be taken. For example, restrict access for passers-by or conduct individual risk assessment for welders. All welders should use the following procedures in order to minimize exposure to EMF fields from the welding circuit:

1. Keep cables close together by twisting or taping them, or using a cable cover.
2. Do not place your body between welding cables. Arrange cables to one side and away from the operator.
3. Do not coil or drape cables around your body.
4. Keep head and trunk as far away from the equipment in the welding circuit as possible.
5. Connect work clamp to workpiece as close to the weld as possible.
6. Do not work next to, sit or lean on the welding power source.
7. Do not weld whilst carrying the welding power source or wire feeder.

About Implanted Medical Devices:
Implanted Medical Device wearers should consult their doctor and the device manufacturer before performing or going near arc welding, spot welding, gouging, plasma arc cutting, or induction heating operations. If cleared by your doctor, then following the above procedures is recommended.
Pour écartez les risques de blessure pour vous-même et pour autrui — lire, appliquer et ranger en lieu sûr ces consignes relatives aux précautions de sécurité et au mode opératoire.

2-1. Symboles utilisés

DANGER! – Indique une situation dangereuse qui si on l’évit pas peut donner la mort ou des blessures graves. Les dangers possibles sont montrés par les symboles joints ou sont expliqués dans le texte.

AVIS – Indique des déclarations pas en relation avec des blessures personnelles.

2-2. Dangers relatifs au soudage à l’arc

Les symboles représentés ci-dessous sont utilisés dans ce manuel pour attirer l’attention et identifier les dangers possibles. En présence de l’un de ces symboles, prendre garde et suivre les instructions afférentes pour éviter tout risque. Les instructions en matière de sécurité indiquées ci-dessous ne constituent qu’un sommaire des instructions de sécurité plus complètes fournies dans les normes de sécurité énumérées dans la Section 2-5. Lire et observer toutes les normes de sécurité.

Seul un personnel qualifié est autorisé à installer, faire fonctionner, entretenir et réparer cet appareil.

Pendant le fonctionnement, maintenir à distance toutes les personnes, notamment les enfants de l’appareil.

UNE DÉCHARGE ÉLECTRIQUE peut entrainer la mort.

Le contact d’organes électriques sous tension peut provoquer des accidents mortels ou des brûlures graves. Le circuit de l’électrode et de la pièce est sous tension lorsque le courant est délivré à la sortie. Le circuit d’alimentation et les circuits internes de la machine sont également sous tension lorsque l’alimentation est sur Marche. Dans le mode de soudage avec un fil, le dérouleur, le bloc de commande du rouleau et toutes les parties métalliques en contact avec le fil sont sous tension électrique. Un équipement installé ou mis à la terre de manière incorrecte ou impropre constitue un danger.

– Ne pas toucher aux pièces électriques sous tension.
– Porter des gants isolants et des vêtements de protection secs et sans trous.
– S’isoler de la pièce à couper et du sol en utilisant des housses ou des tapiss assez grands afin d’éviter tout contact physique avec la pièce à couper ou le sol.
– Ne pas se servir de source électrique à courant électrique dans les zones humides, dans les endroits confins ou là où on risque de tomber.
– Se servir d’une source électrique à courant électrique UNIQUEMENT si le procédé de soudage le demande.
– Si l’utilisation d’une source électrique à courant électrique s’avère nécessaire, se servir de la fonction de télécommande si l’appareil en est équipé.
– D’autres consignes de sécurité sont nécessaires dans les conditions suivantes : risques électriques dans un environnement humide ou si l’on porte des vêtements mouillés ; sur des structures métalliques telles que sols, grilles ou échafaudages ; en position coincée comme asisse, à genoux ou couchée ; ou s’il y a un risque élevé de contact inévitables ou accidentel avec la pièce à souder ou le sol. Dans ces conditions, utiliser les équipements suivants, dans l’ordre indiqué : 1) un poste à souder DC à tension constante (à fil), 2) un poste à souder DC manuel (électrode) ou 3) un poste à souder AC à tension à vide réduite. Dans la plupart des situations, l’utilisation d’un poste à souder DC à fil à tension constante est recommandée. En outre, ne pas travailler seul !
– Installer, mettre à la terre et utiliser le câble d’alimentation correctement conformément à son Manuel d’Utilisation et aux réglementations nationales, gouvernementales et locales.
– Toujours vérifier la terre du cordon d’alimentation. Vérifier et s’assurer que le fil de terre du cordon d’alimentation est bien raccordé à la borne de terre du sectioneur ou que la fiche du cordon est raccordée à une prise correctement mise à la terre.
– En effectuant les raccordements d’entrée, fixer d’abord le conducteur de mise à la terre approprié et contre-vérifier les connexions.
– Les câbles doivent être exempts d’humidité, d’huile et de graisse ; protégez-les contre les étincelles et les pièces métalliques chaudes.
– Vérifier fréquemment le cordon d’alimentation et le conducteur de mise à la terre afin de s’assurer qu’il n’est pas altéré ou dénudé –, le remplacer immédiatement s’il l’est –. Un fil dénudé peut entraîner la mort.
– L’équipement doit être hors tension lorsqu’il n’est pas utilisé.
– Ne pas utiliser des câbles usés, endommagés, de grosseur insuffisante ou mal épissés.
– Ne pas enrouler les câbles autour du corps.
– Si la pièce soudée doit être mise à la terre, le faire directement avec un câble distinct.
– Ne pas toucher l’électrode quand on est en contact avec la pièce, la terre ou une électrode provenant d’une autre machine.
– Ne pas toucher des portes électrodes connectés à deux machines en même temps à cause de la présence d’une tension à vide doublée.
– N’utiliser qu’un matériel en bon état. Réparer ou remplacer sur-le-champ les pièces endommagées. Entretenir l’appareil conformément à ce manuel.
– Porter un harnais de sécurité si l’on doit travailler au-dessus du sol.
– S’assurer que tous les panneaux et couvercles sont correctement en place.
– Fixer le câble de retour de façon à obtenir un bon contact métal-métal avec la pièce à souder ou la table de travail, le plus près possible de la soudure.
– Isoler la pièce de masse quand pas mis à la pièce pour éviter le contact avec tout objet métallique.
– Ne pas raccorder plus d’une électrode ou plus d’un câble de masse à une même borne de sortie de soudage. Débrancher le câble pour le procédé non utilisé.
– Utiliser une protection différentielle lors de l’utilisation d’un équipement auxiliaire dans des endroits humides ou mouillés.

Il reste une TENSION DC NON NÉGLIGEABLE dans les sources de soudage ondulé une fois l’alimentation coupée.

– Arrêter les convertisseurs, débrancher le courant électrique et décharger les condensateurs d’alimentation selon les instructions indiquées dans la partie Entretien avant de toucher les pièces.
LES PIÈCES CHAUDES peuvent provoquer des brûlures.
- Ne pas toucher à mains nues les pièces chaudes.
- Prévoir une période de refroidissement avant de travailler à l’équipement.
- Ne pas toucher aux pièces chaudes, utiliser les outils recommandés et porter des gants de soudage et des vêtements épais pour éviter les brûlures.

LES FUMÉES ET LES GAZ peuvent être dangereux.
- Eloigner votre tête des fumées. Ne pas respirer les fumées.
- À l’intérieur, ventiler la zone et/ou utiliser une ventilation forcée au niveau de l’arc pour l’évacuation des fumées et des gaz de soudage. Pour déterminer la bonne ventilation, il est recommandé de procéder à un prélèvement pour la composition et la quantité de fumées et de gaz auxquelles est exposé le personnel.
- Si la ventilation est médicatoire, porter un respirateur anti-vapeurs approuvé.
- Lire et comprendre les fiches de données de sécurité et les instructions du fabricant concernant les adhésifs, les revêtements, les nettoyants, les consommables, les produits de refroidissement, les dégraissers, les flux et les métaux.
- Travailler dans un espace fermé seulement s’il est bien ventilé ou en portant un respirateur à alimentation d’air. Demander toujours à un surveillant dûment formé de se tenir à proximité. Des fumées et des gaz de soudage peuvent déplacer l’air et abaisser le niveau d’oxygène provoquant des blessures ou des accidents mortels. S’assurer que l’air de respiration ne présente aucun danger.
- Ne pas soudier dans des endroits situés à proximité d’opérations de dégraisseage, de nettoyage ou de pulvérisation. La chaleur et les rayons de l’arc peuvent réagir en présence de vapeurs et former des gaz hautement toxiques et irritants.
- Ne pas souder des métaux munis d’un revêtement, tels que l’acier galvanisé, plaqué ou au cadmium à moins que le revêtement n’ait été enlevé dans la zone de soudure, que l’endroit soit bien ventilé, et en portant un respirateur à alimentation d’air. Les revêtements et tous les métaux renfermant ces éléments peuvent dégager des fumées toxiques en cas de soudage.

LES RAYONS DE L’ARC peuvent provoquer des brûlures dans les yeux et sur la peau.
Le rayonnement de l’arc du procédé de soudage génère des rayons visibles et invisibles intensifs (ultraviolets et infrarouges) susceptibles de provoquer des brûlures dans les yeux et sur la peau. Des étincelles sont projetées pendant le soudage.
- Porter un casque de soudage approuvé et porté de manière correcte.
- Porter un équipement de protection pour le corps fait d’un matériau résistant et ignifuge (cuir, coton robuste, laine). La protection du corps comporte des vêtements sans huile comme par exemple des pantalons sans revers, des chaussures hautes et une casquette.
- Avoir recours à des écrans protecteurs ou à des rideaux pour regarder l’arc.
- Avoir recours à des écrans protecteurs ou à des rideaux pour regarder l’arc.
- Veiller toujours à bien aérer les espaces confinés ou se servir d’un respirateur d’adduction d’air homologué.

LES PIECES DE METAL ou DES SALETES peuvent provoquer des Blessures dans les yeux.
- Le soudage, l’échauffement, le passage de la pièce à la braise en fil de fer, et le meulage génèrent des étincelles et des particules métalliques volantes. Pendant la période de refroidissement des soudures, elles risquent de projeter du laitier.
- Porter des lunettes de sécurité avec écrans latéraux ou un écran facial.

LES ACCUMULATIONS DE GAZ risquent de provoquer des Blessures ou même la mort.
- Fermer l’alimentation du gaz comprimé en cas de non utilisation.
- Veiller toujours à bien aérer les espaces confinés ou se servir d’un respirateur d’adduction d’air homologué.

LE SOUDAGE peut provoquer un incendie ou une explosion.
Le soudage effectué sur des conteneurs fermés tels que des réservoirs, tambours ou des conduites peut provoquer des incendies ou des brûlures. Le contact accidentel de l’électrode avec des objets métalliques peut provoquer des étincelles, une explosion, un surchauffement ou un incendie. Avant de commencer le soudage, vérifier et s’assurer que l’endroit ne présente pas de danger.
- Déplacer toutes les substances inflammables à une distance de 10,7 m de l’arc de soudage. En cas d’impossibilité les recouvrir soigneusement avec des protections homologuées.
- Ne pas souder dans un endroit là où des étincelles peuvent tomber sur des substances inflammables.
- Se protéger et d’autres personnes de la projection d’étincelles et de métal chaud.
- Des étincelles et des matériaux chauds du soudage peuvent facilement passer dans d’autres zones en traversant de petites fissures et des ouvertures.
- Surveiller tout déclenchement d’incendie et tenir un extincteur à proximité.
- Le soudage effectué sur un plafond, plancher, paroi ou séparation doit être surveillé.
- Ne pas effectuer le soudage sur des conteneurs fermés tels que des réservoirs, tambours, ou conduites, à moins qu’ils n’aient été préparés correctement conformément à AWS F4.1 et AWS A6.0 (voir les Normes de Sécurité).
- Ne pas souder là où l’air ambiant pourrait contenir des poussières, gaz émanations inflammables (vapeur d’essence, par exemple).
- Brancher le câble de masse sur la pièce le plus près possible de la zone de soudage pour éviter le transport du courant sur une longue distance par des chemins inconnus éventuels en provoquant des risques d’électrocution, d’étincelles et d’incendie.
- Ne pas utiliser le poste de soudage pour dégeler des conduites gelées.
- En cas de non utilisation, enlever la baguette d’électrode du porte-électrode ou couper le fil à la pointe de contact.
- Porter un équipement de protection pour le corps fait d’un matériau résistant et ignifuge (cuir, coton robuste, laine). La protection du corps comporte des vêtements sans huile comme par exemple des gants de cuir, une chemise solide, des pantalons sans revers, des chaussures hautes et une casquette.
- Avant de souder, retirer toute substance combustible de vos poches tel qu’un allumeur au butane ou des allumettes.
- Une fois le travail achevé, assurez-vous qu’il ne reste aucune trace d’étincelles incandescentes ni de flammes.
- Utiliser exclusivement des fusibles ou coupe-circuits appropriés. Ne pas augmenter leur puissance; ne pas les porter.
- Suivre les recommandations dans OSHA 1910.252(a)(2)(iv) et NFPA 51B pour les travaux à chaud et avoir de la surveillance et un extincteur à proximité.
- Lire et comprendre les fiches de données de sécurité et les instructions du fabricant concernant les adhésifs, les revêtements, les nettoyants, les consommables, les produits de refroidissement, les dégraissers, les flux et les métaux.

LES CHAMPS ÉLECTROMAGNÉTIQUES (CEM) peuvent affecter les implants médicaux.
- Les porteurs de stimulateurs cardiaques et autres implants médicaux doivent rester à distance.
- Les porteurs d’implants médicaux doivent consulter leur médecin et le fabricant du dispositif avant de s’approcher de la zone où se déroule du soudage à l’arc, du soudage par points, du gougeage, de la découpe plasma ou une opération de chauffage par induction.
2-3. Dangers supplémentaires en relation avec l'installation, le fonctionnement et la maintenance

**Risque D’INCENDIE OU D’EXPLOSION.**
- Ne pas placer l’appareil sur, au-dessus ou à proximité de surfaces inflammables.
- Ne pas installer l’appareil à proximité de produits inflammables.
- Ne pas surcharger l’installation électrique — s’assurer que l’alimentation est correctement dimensionnée et protégée avant de mettre l’appareil en service.

**LA CHUTE DE L’ÉQUIPEMENT peut provoquer des blessures.**
- Utiliser l’anneau de levage unique pour soulever l’appareil, NON PAS les chariots, les bouteilles de gaz ou tout autre accessoire.
- Utiliser un équipement de levage de capacité suffisante pour lever l’appareil.
- En utilisant des fourches de levage pour déplacer l’unité, s’assurer que les fourches sont suffisamment longues pour dépasser du côté opposé de l’appareil.
- Tenir l’équipement (câbles et cordons) à distance des véhicules mobiles lors de toute opération en hauteur.
- Suivre les consignes du Manuel des applications pour l’équation mobiles lors de toute opération en hauteur.
- Tenir l’équipement (câbles et cordons) à distance des véhicules mobiles lors de toute opération en hauteur.

**L’EMPLOI EXCESSIF peut SURCHAUFFER L’ÉQUIPEMENT.**
- Prévoir une période de refroidissement ; respecter le cycle opérateur nominal.
- Réduire le courant ou le facteur de marche avant de poursuivre le soudage.
- Ne pas obstruer les passages d’air du poste.

**LES ÉTINCCELLES PROJETÉES peuvent provoquer des blessures.**
- Porter un écran facial pour protéger le visage et les yeux.
- Affûter l’électrode au tungstène uniquement à la meule dotée de protecteurs. Cette manœuvre est à exécuter dans un endroit sûr lorsque l’on porte l’équipement homologué de protection du visage, des mains et du corps.
- Les étincelles risquent de causer un incendie – éloigner toute substance inflammable.

**LES CHARGES ÉLECTROSTATIQUES peuvent endommager les circuits imprimés.**
- Établir la connexion avec la barrette de terre avant de manipuler des cartes ou des pièces.

**Les PIÈCES MOBILES peuvent causer des blessures.**
- Ne pas s’approcher des organes mobiles.
- Ne pas s’approcher des points de coinement tels que des rouleaux de commande.
- Ne pas apporter sur la gâchette avant d’en avoir reçu l’instruction.
- Ne pas diriger le pistolet vers soi, d’autres personnes ou toute pièce mécanique en engageant le fil de soudage.

**L’EXPLOSION DE LA BATTERIE peut provoquer des blessures.**
- Ne pas utiliser l’appareil de soudage pour charger des batteries ou faire démarrer des véhicules à l’aide de câbles de démarrage, sauf si l’appareil dispose d’une fonctionnalité de charge de batterie destinée à cet usage.

**Les PIÈCES MOBILES peuvent causer des blessures.**
- S’abstenir de toucher des organes mobiles tels que des ventilateurs.
- Maintenir fermés et verrouillés les portes, panneaux, recouvrements et dispositifs de protection.
- Lorsque cela est nécessaire pour des travaux d’entretien et de dépannage, faire retirer les portes, panneaux, recouvrements ou dispositifs de protection uniquement par du personnel qualifié.
- Remettre les portes, panneaux, recouvrements ou dispositifs de protection quand l’entretien est terminé et avant de rebrancher l’alimentation électrique.

**LIRE LES INSTRUCTIONS.**
- N’utiliser que les pièces de rechange recommandées par le constructeur.
- Effectuer l’installation, l’entretien et toute intervention selon les manuels d’utilisateurs, les normes nationales, provinciales et de l’industrie, ainsi que les codes municipaux.
**2.6. Informations relatives aux CEM**

Le courant électrique qui traverse tout conducteur génère des champs électromagnétiques (CEM) à certains endroits. Le courant issu d’un soudage à l’arc (et de procédés connexes, y compris le soudage par induction) crée un champ électromagnétique (CEM) autour du circuit de soudage. Les champs électromagnétiques produits peuvent causer interférence à certains implants médicaux, p. ex. les stimulateurs cardiaques. Des mesures de protection pour les porteurs d’implants médicaux doivent être prises: Limiter par exemple tout accès à l’équipement commandé par ordinateur tel que les robots.

1. Rassembler les câbles en les torsadant ou en les attachant avec du ruban adhésif ou avec une housse.
2. Ne pas se tenir au milieu des câbles de soudage. Disposer les câbles d’un côté et à distance de l’opérateur.
3. Ne pas courber et ne pas entourer les câbles autour de votre corps.
4. Maintenir la tête et le torse aussi loin que possible du matériel du circuit de soudage.
5. Connecter la pince sur la pièce aussi près que possible de la soudure.
6. Ne pas travailler à proximité d’une source de soudage, ni s’asseoir ou se pencher dessus.
7. Ne pas souder tout en portant la source de soudage ou le déviodor.

En résumé, les règles pour les porteurs d’implants médicaux : Les porteurs d’implants doivent d’abord consulter leur médecin avant de s’approcher des opérations de soudage à l’arc, de soudage par points, de goudage, du coupage plasma ou de chauffage par induction. Si le médecin approuve, il est recommandé de suivre les procédures précédentes.

*Some symbols are found only on CE products.*
Do not remove or paint over (cover) the label.

Do not discard product (where applicable) with general waste. Reuse or recycle Waste Electrical and Electronic Equipment (WEEE) by disposing at a designated collection facility. Contact your local recycling office or your local distributor for further information.

Environmental Protection Use Period (China)

Wear hat and safety glasses. Use ear protection and button shirt collar. Use welding helmet with correct shade of filter. Wear complete body protection.

Become trained and read the instructions before working on the machine or welding.

SECTION 4 – SPECIFICATIONS

4-1.  Serial Number And Rating Label Location

The serial number and rating information for the power source is located on the front of the machine. Use the rating labels to determine input power requirements and/or rated output. For future reference, write serial number in space provided on back cover of this manual.

4-2. Cooler Specifications

The correction factor on the cooling power at an ambient temperature of 104°F (40°C) is 0.625.

<table>
<thead>
<tr>

<td>Aluminum Protecting Coolant 043809*</td>
</tr>
</tbody>
</table>

*Coolants 043810 and 043809 protect to -37°F (-38°C) and resist algae growth.

NOTICE – Use of any coolant other than those listed in the table voids the warranty on any parts that come in contact with the coolant (pump, radiator, etc.).

4-4. Welding Power Source Specifications

⚠️ Do not use information in unit specifications table to determine electrical service requirements. See Sections 5-14, 5-15 and 5-16 for information on connecting input power.

⚠️ This equipment will deliver rated output at an ambient air temperature up to 104°F (40°C).

4-5. Duty Cycle And Overheating

Duty Cycle is the percentage of 10 minutes that the unit can weld at rated load without overheating.

If unit overheats, output stops, front panel voltmeter/ammeter displays a HLP3 or HLP5 message (see Section 8-1), and cooling fans run. Wait fifteen minutes for unit to cool. Reduce amperage or duty cycle before welding.

**NOTICE** – Exceeding duty cycle can damage unit and void warranty.

**Overheating**

Indicates that the concentration of the Hazardous Substance in all homogeneous materials of the part is below the relevant threshold of China GB/T 26572.

X: 表示该有害物质至少在该部件的某一均质材料中的含量超过中国GB/T26572规定的限量要求。
Indicates that the concentration of the Hazardous Substance in at least one homogeneous material of the part is above the relevant threshold of China GB/T 26572.

Notes
SECTION 5 – INSTALLATION

5-1. Selecting A Location

Movement

Do not move or operate unit where it could tip.

Location And Airflow

Special installation may be required where gasoline or volatile liquids are present – see NEC Article 511 or CEC Section 20.

1 Lifting Eye
2 Lifting Forks
3 Line Disconnect Device

Use lifting eye or lifting forks to move unit.
If using lifting forks, extend forks beyond opposite side of unit.
Locate unit near correct input power supply.
5-2. Selecting Cable Sizes*

**NOTICE** – The Total Cable Length in Weld Circuit (see table below) is the combined length of both weld cables. For example, if the power source is 100 ft (30 m) from the workpiece, the total cable length in the weld circuit is 200 ft (2 cables x 100 ft). Use the 200 ft (60 m) column to determine cable size.

<table>

* This chart is a general guideline and may not suit all applications. If cable overheats, use next size larger cable.

**Weld cable size (AWG) is based on either a 4 volts or less drop or a current density of at least 300 circular mils per ampere. ( ) = mm² for metric use.

***For distances longer than those shown in this guide, call a factory applications rep. at 920-735-4505 (Miller) or 1-800-332-3281 (Hobart).

5-5. Shielding Gas Connections And 115 Volts AC Cooler Receptacle

Turn Off power before connecting to receptacle.

1. Gas Valve In Connection
   Located on rear of unit.
2. Gas Valve Out Connection
   Connections have 5/8-18 right-hand threads.
3. Cylinder Valve
   Open valve slightly so gas flow blows dirt from valve. Close valve.
4. Regulator/Flow Gauge
   Connect regulator/flow gauge to gas cylinder.
   Connect customer supplied gas hose between regulator/flow gauge and gas in fitting.
5. Flow Adjust
   Typical flow rate is 20 cfh (cubic feet per hour).
6. 115 V 15 Amp AC Cooler Receptacle
   Receptacle is protected from overload by circuit breaker CB1 (see Section 7-2).

RC2 is a designated use receptacle intended only for supplying AC power to a Miller-approved cooler.

Tools Needed:

5/8, 3/4, 1-1/8 in.
5-6. TIG Connections With A Two-Piece Air-Cooled Torch

- Turn Off power before making connections.
  1. Gas-In Connection
     Connect gas hose from gas supply to gas-in connection.
  2. Output Selector Switch (See Section 6-2)
     Switch is shown in DCEN (direct current electrode negative) position for TIG HF Impulse DCEN welding. For front panel control display, see Section 5-8. For TIG AC welding, place switch in AC position (see Section 6-2). For TIG AC front panel control display, see Section 5-9.
  3. Work Weld Output Terminal
     Connect work lead to work weld output terminal.
  4. Remote 14 Receptacle
     Connect desired remote control to Remote 14 receptacle (see Section 5-4).
  5. Electrode Weld Output Terminal
     Connect TIG torch to electrode weld output terminal.
  6. Gas-Out Connection
     Connect torch gas hose to gas-out fitting.

Tools Needed:
11/16 in., (21 mm)

5-7. TIG Connections With A One-Piece Air-Cooled Torch

- Turn Off power before making connections.
  1. Gas-In Connection
     Connect gas hose from gas supply to gas-in connection.
  2. Output Selector Switch (See Section 6-2)
     Switch is shown in DCEN (direct current electrode negative) position for TIG HF Impulse DCEN welding. For front panel control display, see Section 5-8. For TIG AC welding, place switch in AC position (see Section 6-2). For TIG AC front panel control display, see Section 5-9.
  3. Work Weld Output Terminal
     Connect work lead to work weld output terminal.
  4. Remote 14 Receptacle
     Connect desired remote control to Remote 14 receptacle (see Section 5-4).
  5. Electrode Weld Output Terminal
     Connect TIG torch to electrode weld output terminal.
  6. Gas-Out Connection
     Connect torch gas hose to gas-out fitting.

Tools Needed:
11/16 in., (21 mm)
5-8. Front Panel Display For TIG HF Impulse DCEN (Direct Current Electrode Negative)

Front Panel
Correct front panel display for basic TIG HF Impulse DCEN welding.

For all front panel switch pad controls: press switch pad to turn on light and enable function.

Green on nameplate indicates a TIG function (see Section 6-1 for description of controls).
5-9. Front Panel Display For TIG AC

Correct front panel display for basic TIG AC welding.

For all front panel switch pad controls: press switch pad to turn on light and enable function.

Green on nameplate indicates a TIG function (see Section 6-1 for description of controls).
5-10. Optional Cooler Connections

Disconnect cooler plug from welding power source receptacle before filling.

1 Cap
Remove cap and fill tank with three gallons of distilled or deionized water for operations above 32°F (0°C), or three gallons of Miller coolant part no. 043810.

2 Gas Out Connection
Connect TIG torch gas hose to gas out fitting.

3 Electrode Weld Output Terminal
Connect TIG torch to electrode weld output terminal.

4 Remote 14 Receptacle
Connect remote control to receptacle if desired.

5 Work Weld Output Terminal
Connect work lead to work weld output terminal.

6 Water-Out (To Torch) Connection
Connect torch water-out (blue) hose to welding power source water-in connection.

7 Water-In (From Torch) Connection
Connect torch water-in (red) hose to welding power source water-out connection.

8 Cooler Power Cord
RC2 is a designated use receptacle intended only for supplying AC power to a Miller-approved cooler.
Connect plug to cooler receptacle to provide power to the cooler.

*HF: High Frequency Current

**Coolant 043810, a 50/50 solution, protect to -37°F (-38°C) and resist algae growth.

NOTICE – Use of any coolant other than those listed in the table voids the warranty on any parts that come in contact with the coolant (pump, radiator, etc.)

Tools Needed:

11/16 in., (21 mm for IEC units)
5-11. Stick Connections

⚠️ Turn Off power before making connections.

1. Work Weld Output Terminal
   Connect work lead to work weld output terminal.

2. Electrode Weld Output Terminal
   Connect electrode holder to electrode weld output terminal.

3. Remote 14 Receptacle
   If desired, connect remote control to Remote 14 receptacle (see Section 5-4).

4. Output Selector Switch (See Section 6-2)
   Switch is shown in DCEP (direct current electrode positive) position for Stick DCEP welding. For front panel control display, see Section 5-12. For Stick AC welding, place switch in AC position. For Stick AC front panel control display, see Section 5-13.

Tools Needed:

11/16 in., (21 mm), 3/4 in.

Notes

Work like a Pro!

Pros weld and cut safely. Read the safety rules at the beginning of this manual.
5-12. Front Panel Display For Stick DCEP (Direct Current Electrode Positive)

1 Front Panel

Correct front panel display for basic Stick DCEP welding.

Gray on nameplate indicates a Stick function (see Section 6-1 for description of controls).

For all front panel switch pad controls: press switch pad to turn on light and enable function.
5-13. Front Panel Display For Stick AC

Correct front panel display for basic Stick AC welding.

For all front panel switch pad controls: press switch pad to turn on light and enable function.

Gray on nameplate indicates a Stick function (see Section 6-1 for description of controls).
5-14. Electrical Service Guide

A. For 250 DX Models

- Input amperage may be higher than shown in table when Balance Control is in an unbalanced position.
- All values in both tables were calculated at 60% duty cycle.
- Actual input voltage cannot exceed ±10% of indicated required input voltage shown in both tables. If actual input voltage is outside of this range, damage to unit may occur.

Failure to follow these electrical service guide recommendations could create an electric shock or fire hazard. These recommendations are for a dedicated circuit sized for the rated output and duty cycle of the welding power source. In dedicated circuit installations, the National Electrical Code (NEC) allows the receptacle or conductor rating to be less than the rating of the circuit protection device. All components of the circuit must be physically compatible. See NEC articles 210.21, 630.11, and 630.12.

If a flexible cord or cable is used, minimum conductor size may increase. See NEC Table 400.5(A) for flexible cord and cable requirements.
5-15. Placing Jumper Links

**Warning:**
- Disconnect and lockout/tag-out input power before installing or moving jumper links.
- Check input voltage available at site.
- Jumper Link Label
  - Only one label is on unit.
- Jumper Links
  - Move jumper links to match input voltage.
  - Move and secure access door, or go on to Section 5-16.

**Tools Needed:**
- 3/8 in.

**Label found on 250 DX models with the following stock numbers:**
- 907194, 907194-021, 907194-031 and 907194-032
- 907195, 907195-021, 907195-031 and 907195-032
- 907199, 907199-021, 907199-031 and 907199-032

**Label found on 250 DX models with stock number 907408, and 907516**
- 907409, 907517
- 907194, 907194-021, 907194-031 and 907194-032
- 907195, 907195-021, 907195-031 and 907195-032
- 907408, 907516

**Label found on 350 LX models with the following stock numbers:**
- 907198, 907198-011, 907198-021, 907198-031 and 907198-032
- 907198, 907198-011, 907198-021, 907198-031 and 907198-032

**Label found on 350 LX models with the following stock numbers:**
- 907199, 907199-021, 907199-031 and 907199-032

**Label found on 250 DX models with the following stock numbers:**
- 907408, 907516
- 907194, 907194-021, 907194-031 and 907194-032
- 907195, 907195-021, 907195-031 and 907195-032
- 907408, 907516

**Label found on 350 LX models with the following stock numbers:**
- 907198, 907198-011, 907198-021, 907198-031 and 907198-032
- 907198, 907198-011, 907198-021, 907198-031 and 907198-032
5-16. Connecting Input Power

Tools Needed:

- 3/8 in. screwdriver
- 3/8 in. wrench

=GND/PE Earth Ground
**Notes**

---

**Work like a Pro!**

Pros weld and cut safely. Read the safety rules at the beginning of this manual.
SECTION 6 – OPERATION

6-1. Controls (350 LX Nameplates Shown)

Top row of lights in upper left corner are On for SMAW. Bottom row are On for GTAW.

Green on nameplate indicates a TIG function, Gray indicates a Stick function.

1. Process Control
   See Section 6-3.

2. Amperage Control
   See Section 6-4.

3. Output Control
   See Section 6-5.

4. Start Mode Control
   See Section 6-9.

5. Voltmeter And Ammeter
   Voltmeter displays average voltage (to the nearest 0.1 V) at the weld output terminals.
   Use meter to preset amperage. Meter displays average weld amperage output of unit to nearest ampere when welding.
   Meters are self-calibrating. No adjustment available.

6. Amperage Adjustment Control
   Use control to adjust amperage, and preset amperage on ammeter. This control may be adjusted while welding.
   For remote amperage control, front panel control setting is the maximum amperage available. For example: If front panel control is set to 200 amps, the range of the remote amperage control is 3 to 200 amps for 250 DX models, and 3 to 200 amps for 350 LX models.

7. Output Selector Switch
   See Section 6-2.

8. Power Switch
   Use switch to turn unit Off and On.

9. Postflow Time Control
   Use control to set length of time (0–50 seconds) gas flows after welding stops. It is important to set enough time to allow gas to flow until after the tungsten and weld puddle has cooled down.
   Application:
   Postflow is required to cool the tungsten and weld, and to prevent contamination of tungsten and weld. Increase postflow time if tungsten or weld are dark in appearance (approximately 1 second per 10 ampere of welding current).

10. Balance/DIG Control
    See Section 6-10.

11. Pulser Controls (Optional on 250 DX model)
    See Section 6-12.

12. Sequence Controls (Optional)
    See Section 6-13.
6-2. Output Selector Switch

1 Output Selector Switch

- Do not use AC output in damp areas, if movement is confined, or if there is danger of falling. Use AC output ONLY if required for the welding process, and then use a remote control.
- Do not change position of switch while welding or while under load.

Use switch to select (DCEN) Direct Current Electrode Negative, AC, or (DCEP) Direct Current Electrode Positive output.

Changing position of Output Selector switch may change Process control, Current control, and Start Mode control, and may require changing Output control settings to properly function with latest Output Selector switch setting.

6-3. Process Control

1 Process Control

- Use control to select Stick or TIG process.
2 STICK Process
- For Stick process, press button to toggle LED to Stick position.
3 TIG Process
- For TIG process, press button to toggle LED to TIG position.

Lit LED indicates selected mode.

When Output Selector switch position changes, LED may change position, based upon last selection.

6-4. Amperage Control

1 Amperage Control

- Use control to select front panel or remote amperage control.
2 Front Panel Position
- For front panel amperage control, press button to toggle LED to Panel position.
3 Remote Amperage Position
- For remote amperage control, press button to toggle LED to Remote position (see Section 5-4).

Lit LED indicates selected mode.

When Output Selector switch position changes, LED may change position, based upon last selection.
6-5. Output Control

1. Output Control

- **Warning:** Weld output terminals are energized when power is On, and Output On LED is lit.
- Use control to select front panel, trigger hold, or remote output control.
- Lit LED indicates selected mode.
- For weld output, press button to toggle LED to On position.

2. Remote Trigger (Standard) Operation

- For remote output control, press button to toggle LED to Remote position (see Section 5-4).
- Torch trigger operation is as shown.
- Initial weld amperage and final amperage is controlled by the remote device, not by the welding power source.
- If On/Off only type trigger is used, it must be a maintained switch. All functions become active.

**Application:** Use Remote Trigger when the operator desires to use a foot pedal or finger amperage control.

- When Output Selector switch (see Section 6-2) position changes, Output control LED will always switch to Remote.
Trigger Hold (2T)

For trigger hold operation, press button to toggle LED to Trigger Hold position. Torch trigger operation is as shown.

When a foot or finger remote control is connected to the welding power source, only trigger input is functional, as amperage is controlled by the welding power source.

Application: Trigger Hold (2T) can help to reduce operator fatigue when long extended welds are made.

If arc is broken and trigger is depressed, HLP-10 will be displayed (see Section 8-1).

If torch trigger is held more than 3 seconds, operation reverts to Remote Trigger (Standard) mode (see previous page).
6-6. **4T, 4T Momentary, And Mini Logic Trigger Operation (Requires Optional Sequence Controls)**

**4T Torch Trigger Operation**

If unit is equipped with optional Sequence Controls (see Section 6-13), 4T trigger method is available.

4T torch trigger operation is as shown.

While in 4T mode, there is a feature available during the main weld sequence that allows the operator to toggle between weld current and final current without breaking the arc.

When a remote switch is connected to the welding power source, only trigger input is functional. Amperage is controlled by the welding power source.

**Application:**

Use 4T trigger method when the functions of a remote current control are desired, but only a remote on/off control is available.

Select 4T trigger method according to Section 6-7.

**4T Momentary Torch Trigger Operation**

If unit is equipped with optional Sequence Controls (see Section 6-13), 4T Momentary trigger method is available.

4T Momentary torch trigger operation is as shown.

While in 4T Momentary mode, once the operator toggles out of weld current and begins final slope, toggling again will break the arc and go to postflow.

**Application:**

Use 4T Momentary trigger method when the functions of a remote current control are desired, but only a remote on/off control is available.

Select 4T Momentary trigger method according to Section 6-7.
Mini Logic Operation

If unit is equipped with optional Sequence Controls (see Section 6-13), Mini Logic operation is available.

Torch trigger operation is as shown.

During Mini Logic welding operation, the weld amperage can be manually changed from the initial amps level to the main weld amps level by pressing and releasing the torch trigger in less than 3/4 seconds.

When a remote switch is connected to the welding power source, only trigger input is functional. Amperage is controlled by the welding power source.

**Application:** This ability to change amperage levels without either initial slope or final slope, gives the operator the opportunity to adjust filler metal without breaking the arc. Select Mini Logic according to Section 6-7.

---

**Diagram:**

- **Postflow**

**Push & Hold Trigger**
- Push & Hold Trigger For More Than 3/4 Sec.
- Push & Release Trigger In Less Than 3/4 Sec.
- Push & Hold Trigger For More Than 3/4 Sec.

**Release Trigger**
- Push & Release Trigger In Less Than 3/4 Sec.
6-7. Reconfiguring Trigger Hold For 4T And Mini Logic Control

To reconfigure Trigger Hold, turn Off power, push and hold Output control button and turn On power switch. Hold button for approximately 7 seconds (or until software version number clears, and meters display [SEL] [H-2].

Press Output control button to change functions. Active function will be displayed on amperage (bottom) meter.

3 Meter Displays
Meter displays for the different functions will be as shown.
Press torch trigger or turn power Off to save setting.

Proceed to Section 6-6 for 4T Operation.
Proceed to Section 6-6 for Mini Logic operation.
Proceed to Section 6-6 for 4T Momentary operation.
These features are only available when optional Sequencer is installed.

1 Output Control
2 Power Switch

Front Panel

1. Output Control
2. Power Switch

Press Output control button to change functions. Active function will be displayed on amperage (bottom) meter.

3 Meter Displays
Meter displays for the different functions will be as shown.
Press torch trigger or turn power Off to save setting.

Proceed to Section 6-6 for 4T Operation.
Proceed to Section 6-6 for Mini Logic operation.
Proceed to Section 6-6 for 4T Momentary operation.
These features are only available when optional Sequencer is installed.
6-8. Selecting TIG Starting Characteristics Using Syncro-Start™ Technology

Use this function to select desired TIG starting characteristics.

1 Start Mode
2 Power Switch
3 Output Selector Switch
4 Meters

To select or change TIG starting characteristics, proceed as follows: turn Off power. Place Output Selector switch in desired position (each position, DCEN, AC, or DCEP has three applicable start characteristics options). Push and hold Start Mode button and turn On power. Hold button for approximately 7 seconds (or until software version number _ _ _ _ _ _ _ clears meters).

The TIG LED and all four Start LEDs will light, and the meters will display [E−] _ _ _ _ _ _, [AC] _ _ _ _ _ _, or [EP] _ _ _ _ _ _, depending on position of Polarity switch.

Press Start Mode button again to step through the three start characteristics choices. Amperage (bottom) meter displays active choice 1 = light start, 2 = medium/normal start, 3 = high/hot start.

Press torch trigger or turn Off power to save setting.

Application:
Select 1 (light/soft start) – when welding at low amperages on thin gauge material.
Select 2 (medium/normal start) – factory default setting used for most welding applications.
Select 3 (high/hot start) – when welding at high amperages on thick materials with a large diameter tungsten.
6-9. Start Mode

1. Start Mode

2. OFF Position
   For SMAW welding, press button to toggle LED to Off position.
   For GTAW welding, use control to select Off for no HF, Lift-Arc®, HF for arc starting only, or continuous HF.

   Application:
   When Off is selected, use the scratch method to start an arc for both the SMAW and GTAW processes.

   When Lift-Arc is selected, start arc as follows:
   3. TIG Electrode
   4. Workpiece
   Touch tungsten electrode to workpiece at weld start point, enable output with torch trigger, foot control, or hand control. Hold electrode to workpiece for 1-2 seconds, and slowly lift electrode. An arc will form when electrode is lifted. Shielding gas begins to flow when electrode touches work piece.
   Normal open-circuit voltage is not present before tungsten electrode touches workpiece, only a low sensing voltage is present between electrode and workpiece. The solid state output contactor does not energize until after electrode is touching workpiece. This allows electrode to touch workpiece without overheating, sticking, or getting contaminated.

   Application:
   Lift-Arc® is used for the DCEN GTAW process when HF Start method is not permitted, or to replace the scratch method.

   When HF Start is selected, start arc as follows:
   High frequency turns on to help start arc when output is enabled. High frequency turns off when arc is started, and turns on whenever arc is broken to help restart arc.

   Application:
   HF Start is used when the DCEN GTAW process is required. When HF Continuous is selected, start arc as follows:
   High frequency turns on when output is energized and remains on for duration of weld.

   Application:
   HF Continuous is used when the AC GTAW process is required. When Output Selector switch position changes, LED may change position, based upon last selection. Some start methods may not be available for all processes.

   Lit LED indicates selected mode.
6-10. Balance/DIG Control

1 Balance/DIG Control

Balance Control (AC GTAW):
AC Balance controls the cleaning action. Increasing the balance setting reduces the oxide cleaning.

Adjusting balance: Set the balance level in the AC TIG zone. Make a test weld. If floating black specs appear in the welding puddle, balance is set too high. Turn balance down and repeat until puddle is clear.

DIG Control (AC And DC SMAW):
When set at 0, short-circuit amperage at low arc voltage is the same as normal welding amperage.

When setting is increased, short-circuit amperage at low arc voltage increases. Set control at 2 and adjust as necessary. Joint configuration, set-up, and process variables may affect setting.

Application:
Control helps arc starting or making vertical, or overhead welds by increasing amperage at low arc voltage, and reduces electrode sticking while welding.

### Balance Control Examples

Ref. S-0795-A
6-11. Preflow Time Control

Use control to set length of time (0.2, 0.4, 0.6, 0.8, 1.0, 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 4.5, 5.0 seconds) gas flows before welding starts.

1. Process Control
2. Power Switch
3. Meters
   To change preflow time, proceed as follows:
   Turn power off. Push and hold Process Control button and turn On power. Hold button for approximately 7 seconds (or until software version number clears meters).
4. TIG LED
   The TIG LED will light and the meters will display [0.4] [SEL]. The factory preflow default setting is 0.4 seconds. To change preflow time, press and release Process Control button until desired time is displayed on meters.

Application:
Preflow is used to purge the immediate weld area of atmosphere. Preflow also aids in consistent arc starting.
6-12. Pulse Controls (Standard On 350 LX Models, Optional On 250 DX Models)

1. On/Off Control
Use control to turn pulse function On and Off.

2. Pulser ON LED
LED is lit when pulser function is enabled.

3. Background Amps
Use Background Amps control to set the low pulse of the weld amperage, which cools the weld puddle and affects overall heat input. Background Amps is set as a percentage of peak amperage.

4. Pulse Frequency
Ranges from 0.25–10.0 pps (pulses per second). Control is used to determine appearance of weld bead.

5. Peak Time
A range of 5–95% of each pulse cycle can be spent at the peak amperage level.

Peak amperage (3-310 amps for 250 DX models, and 3–400 amps for 350 LX models), is set with the Amperage Adjustment control (see Section 6-1). Peak amperage is the highest welding amperage allowed to occur in the pulse cycle. Weld penetration varies directly with peak amperage.

6. Pulsed Output Waveforms
Example shows affect changing the Peak Time control has on the pulsed output waveform.

**Application:**
Pulsing refers to the alternating raising and lowering of the weld output at a specific rate. The raised portions of the weld output are controlled in width, height, and frequency, forming pulses of weld output. These pulses and the lower amperage level between them (called the background amperage) alternately heat and cool the molten welding puddle. The combined effect gives the operator better control of penetration, bead width, crowning, undercutting, and heat input. Controls can be adjusted while welding.

Pulsing can also be used for filler material addition technique training.

**Percent (%) Peak Time Control Setting**
<table>
<thead>
<tr>
<th>Balanced (50%)</th>
<th>Pulsed Output Waveforms</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**More Time At Peak Amperage (80%)**

**More Time At Background Amperage (20%)**
6-13. Sequence Controls (Optional)

1. Initial Time Control
   See Section 6-14.
2. Initial Amperage Control
   See Section 6-14.
3. Final Slope Control
   See Section 6-15.
4. Final Amperage Control
   See Section 6-15.
5. Spot Time Control
   See Section 6-16.

6-14. Initial Time Control And Initial Amperage Control

1. Initial Time Control
   Indicator light is on when Initial Time control function is active.
   Initial Sequence control function is inactive when Spot Time function is active.
   Use control to select 0−15 seconds of start time.

2. Initial Amperage Control
   Indicator Light is on when Initial Sequence control function is active.
   Initial Amperage control function is inactive when Spot Time function is active.
   Use control to select a starting amperage (3−400 amps) that is different from the weld amperage. Initial Amperage can be used with or without a remote control (Initial Amperage and Initial Time control settings will override a remote control device).

**Application:**

Initial Amperage can be used while GTAW welding to assist in preheating cold material prior to depositing filler material, or to ensure a soft start. Initial Amperage can also be used for SMAW to ensure a more consistent arc strike.

Function is enabled, when LED is lit.
6-15. Final Slope Control And Final Amperage Control

1 Final Slope Control
Indicator light is on when Final Slope control function is active.
Final Slope control function is inactive when Spot Time function is active.
Use control to reduce amperage over a set period of time (0−15 seconds) at the end of the weld cycle when NOT using a remote current control.

2 Final Amperage Control
Indicator light is on when Final Amperage control function is active.
Final Amperage control function is inactive when Spot Time function is active (see Section 6-16).
Final amperage is the amperage to which weld amperage has sloped down to (0−100% of amperage set on Amperage Adjust control).

Application:
Final Slope should be used while GTAW welding materials that are crack sensitive, and/or the operator wants to eliminate the crater at the end of the weld.
This applies if the operator is using an on/off only type control to start and stop the welding process.
Do not use this function with a foot or finger amperage control.
Function is enabled, when LED is lit.

6-16. Spot Time Control

1 Spot Time Control
Indicator light is on when Spot Time function is active. When Spot Time function is active, Initial Time, Initial Amperage, Final Slope, and Final Amperage functions are inactive (see Section 6-13).
Used with the (GTAW) TIG Spot process, generally with a direct current electrode negative (DCEN) set-up.
Use control to select 0−15 seconds of spot time.
Use Amperage Adjust control (see Section 6-1) to set amperage.

Application:
TIG spot welding is used for joining thinner materials that are in close contact with the fusion method. A good example would be joining coil ends.
Function is enabled, when LED is lit.
6-17. Timer/Cycle Counter

1 Amperage Control
2 Output Control (Contactor)
   To read timer/cycle counter, hold Amperage and Output (contactor) buttons while turning on power. When machine first powers up, the displays will show the software number and revision for the first seven seconds. It will then show arc time and cycle count.
3 Timer Display
   The hours and minutes are displayed on the volt and amp meters for the first five seconds, and are read as 1, 234 hours and 56 minutes.
4 Cycle Display
   The cycles are displayed on the volt and amp meters for the next five seconds, and are read as 123, 456 cycles.
6-18. Resetting Unit To Factory Default Settings (All Models)

To reset all welding power source functions to original factory settings, turn power off. Push and hold the Process, Amperage, Output, and Start controls and turn On power. Hold switch pads for approximately 7 seconds (or until software version number _ _ _ _ _ _-_ clears meters).

- Disconnect power before maintaining.
- Maintain more often during severe conditions.

* To be done by Factory Authorized Service Agent

### 7-2. Supplementary Protector CB1

- Turn off power before resetting breaker.
- Supplementary Protector CB1
- If CB1 opens, high frequency and output to the 115 volts AC duplex receptacle stop. Press button to reset CB1.
7-3. Adjusting Spark Gaps

1. Tungsten End Of Point
   Replace point if tungsten end disappears; do not clean or dress tungsten.

2. Spark Gap
   Normal spark gap is 0.008 in (0.203 mm).
   If adjustment is needed, proceed as follows:

3. Adjustment Screws
   Loosen screws. Place gauge of proper thickness in spark gap.

4. Pressure Point
   Apply slight pressure at point until gauge is held firmly in gap. Tighten screws. Adjust other gap.

Reinstall right side panel.

Tools Needed:
- 0.008 in. (0.203 mm)
- 3/8 in.
- 5/32 in.

7-4. Routine Maintenance For Optional Cooler

- Disconnect power before maintaining.

7-5. Coolant Maintenance

Disconnect power before maintaining.

1 Coolant Filter

Unscrew housing to clean filter.

Changing coolant: Drain coolant by tipping unit forward. Fill with clean water and run for 10 minutes. Drain and refill.

**NOTICE** – If replacing hoses, use hoses compatible with ethylene glycol, such as Buna-n, Neoprene, or Hypalon. Oxy-acetylene hoses are not compatible with any product containing ethylene glycol.

---

### Application
- **Low Conductivity Coolant**
  - No. 043810**
  - Distilled Or Deionized Water
  - OK Above 32°F (0°C)

### GTAW Or Where HF* Is Used

<table>
<thead>
<tr>
<th>Application</th>

</tr>
</thead>
<tbody>
<tr>
<td>Coolant</td>
<td>Low Conductivity Coolant No. 043810**. Distilled Or Deionized Water OK Above 32°F (0°C)</td>
</tr>
</tbody>
</table>

*HF: High Frequency Current

**Coolant 043 810, a 50/50 solution, protect to -37°F (-38°C) and resist algae growth.

**NOTICE** – Use of any coolant other than those listed in the table voids the warranty on any parts that come in contact with the coolant (pump, radiator, etc.)
8-1. Voltmeter/Ammeter Help Displays

0  Help 0 Display
Indicates a short in the thermal protection circuitry located on the transformer/stabilizer of the unit.

1  Help 1 Display
An SCR overcurrent or undercurrent condition has occurred. Turn power off and back on to correct condition.

2  Help 2 Display
Indicates an open in the thermal protection circuitry located on the transformer/stabilizer of the unit.

3  Help 3 Display
Indicates the transformer/stabilizer of the unit has overheated. The unit has shut down to allow the fan to cool it (see Section 4-5). Operation will continue when the unit has cooled.

4  Help 4 Display
Indicates an open in the thermal protection circuitry located on the rectifier assembly of the unit.

5  Help 5 Display
Rectifier assembly has overheated. The unit has shut down to allow the fan to cool unit (see Section 4-5). Operation will continue when the unit has cooled.

6  Help 9 Display
Indicates a short in the thermal protection circuitry located on the rectifier assembly of the unit.

7  Help 10 Display
Indicates Remote Output control is activated. Release Remote Output control to clear help message.

8  Help 11 Display
Output Selector switch is not in correct position (see Section 6-2).

9  Help 12 Display
Indicates a non-allowable set-up of the front panel.
### Troubleshooting The Welding Power Source

**NOTICE** – The remedies listed below are recommendations only. If these remedies do not fix the trouble with your unit, have a Factory Authorized Service Agent check unit. There are no user serviceable parts inside unit.

Refer to Section 8-1 for any Help (HLP) message displayed on voltmeter/ammeter.

<table>

SECTION 11 – HIGH FREQUENCY

11-1. Welding Processes Requiring High Frequency

- **TIG** helps arc jump air gap between torch and workpiece and/or stabilize the arc.

11-2. Installation Showing Possible Sources Of HF Interference

**Sources of Direct High-Frequency Radiation**
1. High-Frequency Source (welding power source with built-in HF or separate HF unit)
2. Weld Cables
3. Torch
4. Work Clamp
5. Workpiece
6. Work Table

**Sources of Conduction of High Frequency**
7. Input Power Cable
8. Line Disconnect Device
9. Input Supply Wiring

**Sources of Reradiation of High Frequency**
10. Ungrounded Metal Objects
11. Lighting
12. Wiring
13. Water Pipes and Fixtures
14. External Phone and Power Lines

Best Practices Not Followed
11-3. Recommended Installation To Reduce HF Interference

1. High-Frequency Source (welding power source with built-in HF or separate HF unit)
   Ground metal machine case (clean paint from around hole in case, and use case screw), work output terminal, line disconnect device, input supply, and worktable.

2. Center Point of Welding Zone
   Midpoint between high-frequency source and welding torch.

3. Welding Zone
   A circle 50 ft (15 m) from center point in all directions.

4. Weld Output Cables
   Keep cables short and close together.

5. Conduit Joint Bonding and Grounding
   Electrically join (bond) all conduit sections using copper straps or braided wire. Ground conduit every 50 ft (15 m).

6. Water Pipes and Fixtures
   Ground water pipes every 50 ft (15 m).

7. External Power or Telephone Lines
   Locate high-frequency source at least 50 ft (15 m) away from power and phone lines.

8. Grounding Rod
   Consult the National Electrical Code for specifications.

9. Metal Building Panel Bonding Methods
   Bolt or weld building panels together, install copper straps or braided wire across seams, and ground frame.

10. Windows and Doorways
    Cover all windows and doorways with grounded copper screen of not more than 1/4 in (6.4 mm) mesh.

11. Overhead Door Track
    Ground the track.

Metal Building Requirements

Best Practices Followed

Ref. S-0695 / Ref. S-0695
Whenever possible and practical, use DC weld output instead of AC weld output.

12-1. Selecting Tungsten Electrode (Wear Clean Gloves To Prevent Contamination Of Tungsten)

A. Select Tungsten Electrode

Not all tungsten electrode manufacturers use the same colors to identify tungsten type. Contact the tungsten electrode manufacturer or reference the product packaging to identify the tungsten you are using.

<table>

2% Ceria, 1.5% Lanthanum, Or 2% Thorium Alloy Tungstens

| .040” (1 mm)       | Pure Tungsten Not Recommended For DCEN – Argon |
| 1/16” (1.6 mm)     | 10-60                                              |
| 3/32” (2.4 mm)     | 50-100                                             |
| 1/8” (3.2 mm)      | 100-160                                            |
|                    | Pure Tungsten                                     | 150-210                                       |

♦ Typical argon shielding gas flow rates are 10 to 25 CFH (cubic feet per hour).

Figures listed are a guide and are a composite of recommendations from American Welding Society (AWS).

B. Electrode Composition

<table>
<thead>
<tr>
<th>Tungsten Type</th>
<th>Application Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>2% Cerium (Grey*)</td>
<td>Good all-around tungsten for both AC and DC welding.</td>
</tr>
<tr>
<td>1.5–2% Lanthanum (Yellow/Blue)</td>
<td>Excellent low amp starts for AC and DC welding.</td>
</tr>
<tr>
<td>2% Thorium (Red)</td>
<td>Commonly used for DC welding, not ideal for AC.</td>
</tr>
<tr>
<td>Pure Tungsten (Green)</td>
<td>Not Recommended for inverters! For best results in most applications use a sharpened cerium or lanthanum electrode for AC and DC welding.</td>
</tr>
</tbody>
</table>

* Color may vary depending on manufacturer, please refer to manufacturer’s guide for color designation.
12-2. Preparing Tungsten Electrode For Welding With Phase Control Machines

Grinding the tungsten electrode produces dust and flying sparks which can cause injury and start fires. Use local exhaust (forced ventilation) at the grinder or wear an approved respirator. Read MSDS for safety information. Consider using tungsten containing ceria, lanthana, or yttria instead of thoria. Grinding dust from thoriated electrodes contains low-level radioactive material. Properly dispose of grinder dust in an environmentally safe way. Wear proper face, hand, and body protection. Keep flammables away.

A. Preparing Tungsten For DC Electrode Negative (DCEN) Welding

1. Grinding Wheel
   - Grind end of tungsten on fine grit, hard abrasive wheel before welding. Do not use wheel for other jobs or tungsten can become contaminated causing lower weld quality.

2. Tungsten Electrode
   - A 2% ceriated tungsten is recommended.

3. Ideal Grind Angle Range: 15° to 30°
   - 30 degrees is the recommended electrode grind angle.

4. Straight Ground
   - Grind lengthwise, not radial.

B. Preparing Tungsten For AC Welding

1. Tungsten Electrode
   - A pure tungsten is recommended.

2. Balled End
   - Ball end of tungsten by applying AC amperage recommended for a given electrode diameter (see Section 12-1). Let ball on end of the tungsten take its own shape.

Notes
13-1. Positioning The Torch

Grinding the tungsten electrode produces dust and flying sparks which can cause injury and start fires. Use local exhaust (forced ventilation) at the grinder or wear an approved respirator. Read MSDS for safety information. Consider using cerium or lanthanum based tungsten instead of thoriated. Thorium dust contains low-level radioactive material. Properly dispose of grinder dust in an environmentally safe way. Wear proper face, hand, and body protection. Keep flammables away.

1 Workpiece
Make sure workpiece is clean before welding.

2 Work Clamp
Place as close to the weld as possible.

3 Torch

4 Filler Rod (If Applicable)

5 Gas Cup

6 Tungsten Electrode
Select and prepare tungsten according to Section 12.

Guidelines:
The inside diameter of the gas cup should be at least three times the tungsten diameter to provide adequate shielding gas coverage. (For example, if tungsten is 1/16 in diameter, gas cup should be a minimum of 3/16 in diameter.

Tungsten extension is the distance the tungsten extends out gas cup of torch.

The tungsten extension should be no greater than the inside diameter of the gas cup.

Arc length is the distance from the tungsten to the workpiece.

Bottom View Of Gas Cup
13-2. Torch Movement During Welding

Tungsten Without Filler Rod

- Form pool
- Tilt torch
- Move torch to front

Welding direction

Tungsten With Filler Rod

- Form pool
- Tilt torch
- Add filler metal
- Move torch to front
- Remove rod

Welding direction

13-3. Positioning Torch Tungsten For Various Weld Joints

- Butt Weld And Stringer Bead
- "T" Joint
- Lap Joint
- Corner Joint
**Warranty Questions?**

Call 1-800-4-A-MILLER for your local Miller distributor.

Your distributor also gives you...

**Service**

You always get the fast, reliable response you need. Most replacement parts can be in your hands in 24 hours.

**Support**

Need fast answers to the tough welding questions? Contact your distributor. The expertise of the distributor and Miller is there to help you, every step of the way.

---

**LIMITED WARRANTY** — Subject to the terms and conditions below, Miller Electric Mfg. Co., Appleton, Wisconsin, warrants to its original retail purchaser that new Miller equipment sold after the effective date of this limited warranty is free of defects in material and workmanship at the time it is shipped by Miller. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS.

Within the warranty periods listed below, Miller will repair or replace any warranted parts or components that fail due to such defects in material or workmanship. Miller must be notified in writing within thirty (30) days of such defect or failure, at which time Miller will provide instructions on the warranty claim procedures to be followed. If notification is submitted as an online warranty claim, the claim must include a detailed description of the fault and the troubleshooting steps taken to identify failed components and the cause of their failure.

Miller shall honor warranty claims on warranted equipment listed below in the event of such a failure within the warranty time periods. All warranty time periods start on the delivery date of the equipment to the original end-user purchaser, and not to exceed twelve months after the equipment is shipped to a North American distributor or eighteen months after the equipment is shipped to an International distributor.

1. **5 Years Parts — 3 Years Labor**
   - Original Main Power Rectifiers Only to Include SCRs, Diodes, and Discrete Rectifier Modules

2. **3 Years Parts and Labor**
   - Auto-Darkening Helmet Lenses (Except Classic Series) (No Labor)
   - Engine Driven Welder/Generators
   - Inverter Power Sources (Unless Otherwise Stated)
   - Plasma Arc Cutting Power Sources
   - Process Controllers
   - Semi-Automatic and Automatic Wire Feeders
   - Transformer/Rectifier Power Sources

3. **2 Years Parts and Labor**
   - Auto-Darkening Helmet Lenses – Classic Series Only (No Labor)
   - Fume Extractors – Capture 5, Filtair 400 and Industrial Collector Series

4. **1 Year — Parts and Labor Unless Specified**
   - AugmentedArc and LiveArc Welding Systems
   - Automatic Motion Devices
   - Bernard STB Air-Cooled MIG Guns (No Labor)
   - CoolBelt and CoolBand Blower Unit (No Labor)
   - Desiccant Air Dryer System
   - External Monitoring Equipment and Sensors
   - Field Options
   - RFCS Foot Controls (Except RFCS-RJ45)
   - Fume Extractors – Filtair 130, MVX and SWX Series
   - HF Units
   - ICE/XT Plasma Cutting Torches (No Labor)
   - Induction Heating Power Sources, Coolers

5. **6 Months — Parts**
   - Batteries

6. **90 Days — Parts**
   - Accessory (Kits)
   - Canvas Covers
   - Induction Heating Coils and Blankets, Cables, and Non-Electronic Controls
   - M-Guns
   - MIG Guns, Subarc (SAW) Torches, and External Cladding Heads
   - Remote Controls and RFCS-RJ45
   - Replacement Parts (No labor)
   - Spoolmate Spoolguns

* Miller’s True Blue® Limited Warranty shall not apply to:
  1. Consumable components; such as contact tips, cutting nozzles, contactors, brushes, relays, work station table tops and welding curtains, or parts that fail due to normal wear. (Exception: brushes and relays are covered on all engine-driven products.)
  2. Items furnished by Miller, but manufactured by others, such as engines or track accessories. These items are covered by the manufacturer’s warranty, if any.
  3. Equipment that has been modified by any party other than Miller, or equipment that has been improperly installed, improperly operated or misused based upon industry standards, or equipment which has not had reasonable and necessary maintenance, or equipment which has been used for operation outside of the specifications for the equipment.

**MILLER PRODUCTS ARE INTENDED FOR PURCHASE AND USE BY COMMERCIAL/INDUSTRIAL USERS AND PERSONS TRAINED AND EXPERIENCED IN THE USE AND MAINTENANCE OF WELDING EQUIPMENT.**

In the event of a warranty claim covered by this warranty, the exclusive remedies shall be, at Miller’s option: (1) repair; or (2) replacement; or, where authorized in writing by Miller in appropriate cases, (3) the reasonable cost of repair or replacement at an authorized Miller service station; or (4) payment of or credit for the purchase price (less reasonable depreciation based upon actual use) upon return of the goods at customer’s risk and expense. Miller’s option of repair or replacement will be F.O.B., Factory at Appleton, Wisconsin, or F.O.B. at a Miller authorized service facility as determined by Miller. Therefore no compensation or reimbursement for transportation costs of any kind will be allowed.

**TO THE EXTENT PERMITTED BY LAW, THE REMEDIES PROVIDED HEREBIN ARE THE SOLE AND EXCLUSIVE REMEDIES. IN NO EVENT SHALL MILLER BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING LOSS OF PROFIT), WHETHER BASED ON CONTRACT, TORT OR ANY OTHER LEGAL THEORY.**

**ANY EXPRESS WARRANTY NOT PROVIDED HEREBIN AND ANY IMPLIED WARRANTY, GUARANTEE OR REPRESENTATION AS TO PERFORMANCE, AND ANY REMEDY FOR BREACH OF CONTRACT TORT OR ANY OTHER LEGAL THEORY WHICH, BUT FOR THIS PROVISION, MIGHT ARISE BY IMPLICATION, OPERATION OF LAW, CUSTOM OF TRADE OR COURSE OF DEALING, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE, WITH RESPECT TO ANY AND ALL EQUIPMENT FURNISHED BY MILLER IS EXCLUDED AND DISCLAIMED BY MILLER.**

Some states in the U.S.A. do not allow limitations of how long an implied warranty lasts, or the exclusion of incidental, indirect, special or consequential damages, so the above limitation or exclusion may not apply to you. This warranty provides specific legal rights, and other rights may be available, but may vary from state to state.

In Canada, legislation in some provinces provides for certain additional warranties or remedies other than as stated herein, and to the extent that they may not be waived, the limitations and exclusions set out above may not apply. This Limited Warranty provides specific legal rights, and other rights may be available, but may vary from province to province.
